SETUP AND INSTALLATION

The installation of your new Gotical water filter is designed to be straightforward and does not require any special tools or shutting off your water supply.

1. **Locate the Existing Filter:** Refer to your refrigerator's user manual to find the location of the current water filter. This is typically inside the refrigerator compartment or in the grille at the bottom.
2. **Remove the Old Filter:** Twist the old filter counter-clockwise (or as per your refrigerator's instructions) until it unlocks. Pull the filter straight out. A small amount of water may drip out; this is normal.
3. **Prepare the New Filter:** Remove the protective cap from the new Gotical filter.
4. **Install the New Filter:** Insert the new filter into the housing, aligning the arrow on the filter with the arrow on the filter housing. Push the filter firmly into place and twist it clockwise until it locks securely. You should feel it click into position.
5. **Flush the System:** After installation, dispense approximately 2-3 gallons of water through the refrigerator's dispenser to flush out any air and carbon fines from the new filter. This will ensure optimal water quality.
6. **Reset Filter Indicator:** If your refrigerator has a filter change indicator light, consult your refrigerator's manual for instructions on how to reset it. This usually involves pressing and holding a specific button for a few seconds.

OPERATING INSTRUCTIONS

Once installed, the Gotical water filter operates continuously to purify your drinking water and ice. No further user interaction is required for its daily operation.

- Ensure the refrigerator's water dispenser and ice maker are functioning correctly after installation.
- The filter will automatically reduce contaminants as water passes through it.

MAINTENANCE

Regular replacement of your water filter is crucial for maintaining optimal water quality and refrigerator performance.

- **Replacement Frequency:** It is recommended to replace your water filter every 6 months, or sooner if you notice a decrease in water flow or taste/odor issues. This ensures consistent filtration performance.
- **Disposal:** Dispose of the old filter according to your local waste disposal guidelines.

TROUBLESHOOTING

Problem	Possible Cause	Solution
Slow Water Flow	Air trapped in the system; filter nearing end of life; incorrect installation.	Flush 2-3 gallons of water through the dispenser. If problem persists, replace filter. Ensure filter is fully seated.
Bad Taste/Odor in Water	New filter needs flushing; filter has expired; filter is not genuine.	Flush 2-3 gallons of water. Replace filter if it's old. Ensure you are using a genuine Gotical filter.

Problem	Possible Cause	Solution
Water Leakage	Filter not properly installed; damaged O-rings.	Remove and re-install the filter, ensuring it is securely twisted into place. Check O-rings for damage.
