1. Prepare the Dishwasher:

- Disconnect the dishwasher from its power source by unplugging it or turning off the circuit breaker.

- Open the dishwasher door and pull out the lower dishrack completely.
- Remove any dishes or items from the dishrack.

2. Remove the Old Roller:

- Locate the damaged or worn lower dishrack roller.
- Depending on your specific dishrack design, the roller may snap into place or be held by a small clip. Carefully pry off the old roller using a flat-head screwdriver or by hand.
- Note how the old roller was attached to ensure correct installation of the new one.

3. Install the New Roller:

- Align the new YTBDDHYUE replacement roller with the mounting post on the dishrack.
- Push the roller firmly onto the post until it clicks into place or is securely seated. Ensure it rotates freely.
- Repeat for any other rollers that need replacement.

4. Test and Reassemble:

- Gently slide the lower dishrack back into the dishwasher to ensure the new rollers glide smoothly along the tracks.
- Reconnect the dishwasher to its power source.
- Perform a quick test by sliding the dishrack in and out several times.

5. OPERATING (USAGE)

After successful installation, the lower dishrack should slide in and out smoothly without resistance or catching. Ensure the dishrack is properly seated on the rollers before loading dishes.

6. MAINTENANCE

- Periodically inspect the dishrack rollers for signs of wear, cracks, or damage.
- Keep the dishrack tracks clean from food debris or obstructions that could impede roller movement.
- Avoid overloading the dishrack, as excessive weight can put undue stress on the rollers and tracks.

7. TROUBLESHOOTING

Problem	Possible Cause	Solution
Dishrack not sliding smoothly	Roller not properly seated; debris in track; damaged roller.	Ensure roller is securely attached. Clean tracks. Inspect roller for damage and replace if necessary.
