5. INSTALLATION INSTRUCTIONS

Follow these steps to replace the front caster wheel on your Dreame robot vacuum cleaner. Ensure the robot vacuum is powered off and disconnected from its charging base before beginning.

- 1. Prepare the Robot:** Turn your robot vacuum cleaner upside down on a clean, soft surface to prevent scratches.
- 2. Locate the Front Caster Wheel:** Identify the existing front caster wheel assembly. It is typically located at the front center of the robot.
- 3. Remove the Old Wheel:** Gently pull the old caster wheel assembly straight out from its housing. It may require a slight amount of force. Avoid twisting or prying excessively to prevent damage to the robot's chassis.

4. **Inspect the Housing:** Once the old wheel is removed, inspect the wheel housing for any debris, hair, or dust. Clean the area thoroughly if necessary.
5. **Install the New Wheel:** Align the shaft of the new DFHYTHU Front Caster Wheel with the opening in the robot's chassis. Push the new wheel firmly into place until you hear or feel a click, indicating it is securely seated.

6. MAINTENANCE

Regular maintenance of your robot vacuum's front caster wheel is crucial for its longevity and optimal performance. The DFHYTHU Front Caster Wheel is designed for durability, but proper care extends its lifespan.

- **Regular Cleaning:** Periodically remove the front caster wheel (refer to installation steps 1-3) and clean any accumulated hair, dust, or debris from the wheel and its housing. Use a small brush or a pair of tweezers for this task.
- **Inspection:** Check the wheel for any signs of wear, cracks, or damage. Ensure it rotates freely without resistance. If the wheel shows significant wear or damage, consider replacing it to maintain efficient navigation.
- **Avoid Obstructions:** While the wheel is designed for various terrains, avoid prolonged exposure to sharp objects or excessively rough surfaces that could cause premature wear.

7. TROUBLESHOOTING

If you experience issues with your robot vacuum's movement after installing the new front caster wheel, consider the following:

- **Wheel Not Rotating Freely:** Remove the wheel and check for any trapped debris (hair, lint, small particles) in the axle or housing. Clean thoroughly and re-install.
- **Robot Moving Unevenly or Stalling:** Ensure the wheel is fully seated in its housing. A loose wheel can cause navigation issues. Push firmly until it clicks into place.
- **Unusual Noise:** If the wheel makes unusual noises, remove it and inspect for any foreign objects or damage. If the wheel itself is damaged, replacement may be necessary.
- **Compatibility Check:** Double-check that the wheel is indeed compatible with your specific Dreame robot vacuum model. Refer to Section 3: Compatibility.

If problems persist after following these steps, please contact the seller for further assistance.
