KingChii JCC-70

KingChii JCC-70 70L Electric Cigar Humidor Instruction Manual

Model: JCC-70

INTRODUCTION

This manual provides essential information for the safe and efficient operation of your KingChii JCC-70 70L Electric Cigar Humidor. Please read these instructions thoroughly before setup and use to ensure optimal performance and longevity of your unit. This humidor is designed to maintain precise temperature and humidity levels, creating an ideal environment for cigar preservation.

SAFETY INFORMATION

- Ensure the humidor is placed on a stable, level surface.
- Do not block ventilation openings. Allow adequate space around the unit for proper airflow.
- Use only distilled water in the humidification system to prevent mineral buildup and maintain hygiene.
- Do not install the humidor in an enclosed cabinet or confined space, as this can impede airflow and affect performance.
- Keep the humidor away from direct sunlight or heat sources.
- Unplug the unit before cleaning or performing any maintenance.

PACKAGE CONTENTS

- KingChii JCC-70 Electric Cigar Humidor Unit
- Spanish Cedar Wood Shelves (Quantity: 3)

- Spanish Cedar Wood Drawer with Hygrometer (Quantity: 1)
- Moisture Container (for humidification)
- Power Cord
- Instruction Manual

SETUP

1. Unpacking and Placement

Carefully remove the humidor from its packaging. Place the unit in an open room, ensuring sufficient space around all sides for proper air circulation. Avoid placing it in direct sunlight or near heat sources. Do not build this unit into any type of enclosure like a cabinet, as it relies on ambient air for cooling and heating.

Figure 1: KingChii JCC-70 Electric Cigar Humidor. This image shows the sleek black and stainless steel exterior of

the humidor with a glass door revealing cedar wood shelves inside.

2. Initial Cleaning

Before first use, remove all shelves and the drawer. Wipe the interior of the humidor and all cedar components with a clean cloth dampened with distilled water. Ensure no water directly touches the wood for extended periods, as this may cause damage. Allow all parts to air dry completely.

3. Seasoning the Humidor

Seasoning is crucial to prepare the cedar wood for cigar storage. Fill the included moisture container with distilled water. Place the container inside the humidor. Close the humidor door and allow the humidity to stabilize. Monitor the hygrometer in the drawer; the humidity should reach 65% to 78%. This process may take up to 3 days. Once seasoned, you can begin to add your cigars.

Figure 2: Humidification System. This image highlights the smart touch control panel and the water reservoir for the built-in humidification system.

4. Power Connection

Plug the power cord into a suitable electrical outlet. The control panel display will illuminate, indicating the current temperature and humidity.

OPERATING INSTRUCTIONS

1. Control Panel Overview

The humidor features an electronic touch screen control panel located on the top of the glass door. It displays current temperature and humidity. Buttons include temperature up/down arrows and a light control button.

Figure 3: Smart Temperature & Humidity Control. This image shows a close-up of the touch control panel with digital displays for temperature and humidity, along with adjustment buttons.

2. Setting Temperature

Use the up and down arrow buttons on the control panel to adjust the desired temperature. The recommended constant temperature range is 61-72°F (16-22°C).

3. Setting Humidity

The humidor's built-in humidification system maintains a humidity range of 65%-78%. The smart touch panel allows for precise humidity control within this range. Ensure the moisture container is adequately filled with distilled water.

4. Internal Lighting

Press the light bulb icon on the control panel to turn the energy-saving LED interior lights on or off. This allows for easy viewing of your cigar collection.

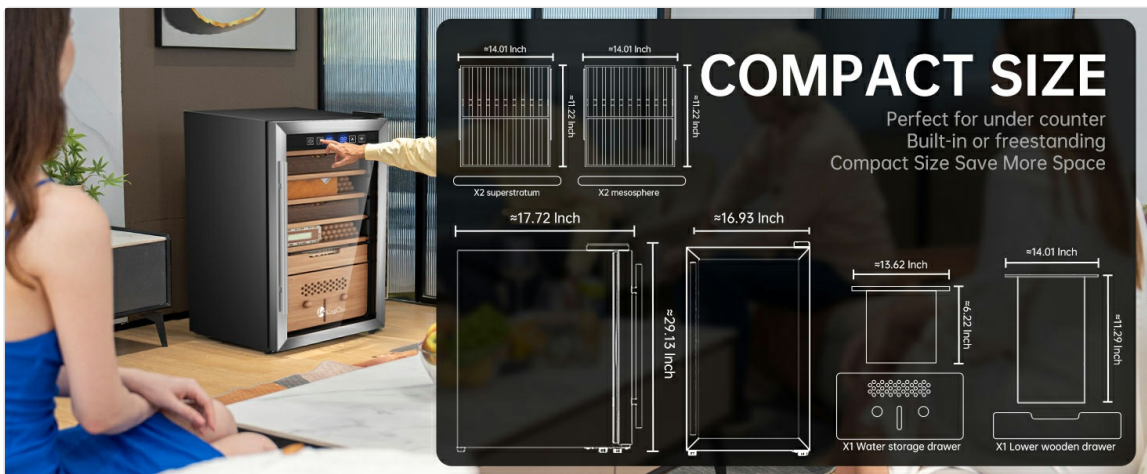

Figure 4: Soft Interior Lighting. This image shows the interior LED lights illuminating the cedar shelves and cigars.

5. Loading Cigars

Once the humidor is seasoned and the desired temperature and humidity levels are reached, you can

place your cigars on the Spanish cedar wood shelves and in the drawer. The shelves are movable, allowing for flexible storage arrangements.

MAINTENANCE

1. Regular Cleaning

Wipe the interior of the humidor and cedar components with a clean cloth dampened with distilled water every 1 to 2 months, or as needed. Ensure the unit is unplugged before cleaning. Avoid using harsh chemicals or abrasive cleaners.

2. Refilling Humidification System

Regularly check the water level in the moisture container. Refill with distilled water as needed to maintain the desired humidity levels. Ensure the water does not directly touch the cedar wood.

3. Cedar Wood Care

The Spanish cedar wood helps maintain humidity, removes peculiar odors, and prevents drying and

mold. Ensure the wood remains properly humidified. If the humidity level drops below the recommended range, supplement with distilled water.

TROUBLESHOOTING

- **Unit not powering on:** Check if the power cord is securely plugged into the outlet and the humidor.
- **Temperature/Humidity not stable:** Ensure the humidor is not in direct sunlight or near heat sources. Verify that ventilation openings are not blocked. Check if the moisture container has enough distilled water.
- **Excessive humidity:** If the humidity level exceeds 80%, it may indicate too much distilled water. Remove the moisture container or sponge and expose it to air to allow some water to evaporate before returning it to the humidor.
- **Unusual noise:** Ensure the unit is on a stable, level surface. Check for any obstructions around the fan.

SPECIFICATIONS

Feature	Specification
Model Number	JCC-70
Product Dimensions	8.3 x 8.6 x 12.4 inches
Item Weight	56 pounds
Manufacturer	KingChii
Temperature Range	61-72°F (16-22°C)
Humidity Range	65%-78%
Humidification System	Built-in
Shelves Material	Spanish Cedar Wood
Door Type	Double-layer tempered glass
