6. MAINTENANCE

6.1 Cleaning the Vanity Cabinet

- Wipe the plywood cabinet surfaces with a soft, damp cloth.
- For stubborn stains, use a mild, non-abrasive cleaner specifically designed for wood or melamine surfaces.
- Avoid excessive moisture. Immediately wipe up any spills to prevent water damage.
- Do not use abrasive pads, harsh chemicals, or solvents, as these can damage the finish.

6.2 Cleaning the Resin Sink

- Clean the resin sink regularly with a soft cloth and mild soap or a non-abrasive bathroom cleaner.
- Rinse thoroughly with water after cleaning to remove any soap residue.

- Avoid using abrasive cleaners, scouring pads, or strong chemical agents (e.g., bleach, drain cleaners) as they can dull or damage the resin surface.

6.3 Hinge and Hardware Care

- Periodically check all screws and hardware for tightness and re-tighten if necessary.
- The soft-closing hinges are designed for durability. If they become stiff, a small amount of silicone-based lubricant can be applied, but typically they require no maintenance.

7. TROUBLESHOOTING

Problem	Possible Cause	Solution
Doors do not close softly or are misaligned.	Loose hinges or incorrect hinge adjustment.	Tighten hinge screws. Adjust hinge settings (refer to hinge manufacturer's instructions if available, or general cabinet hinge adjustment guides).
Water leaks from sink or plumbing.	Improperly sealed faucet or drain connections.	Check all plumbing connections. Ensure plumber's putty or silicone sealant is correctly applied where needed. Re-tighten connections. Consult a plumber if necessary.
Vanity feels unstable or wobbly.	Uneven floor or loose leg attachments.	Adjust the leveling feet on the vanity legs. Ensure all leg attachment screws are tight.
Scratches or marks on cabinet surface.	Impact or abrasive cleaning.	For minor scratches, a wood repair marker or furniture polish may help. Prevent future damage by using soft cloths for cleaning and avoiding sharp objects.
