9. TROUBLESHOOTING

Drive Not Detected:

- Ensure the USB cable is securely connected to both the SSD and your device.
- Try connecting the SSD to a different USB port on your device.
- Test with a different USB cable if available.
- Restart your computer or mobile device.
- Check your device's Disk Management (Windows) or Disk Utility (Mac) to see if the drive is recognized but unformatted. If so, format the drive (this will erase all data).

Slow Transfer Speeds:

- Ensure you are using a USB 3.2 Gen2 compatible port and cable for optimal performance. Older USB ports (e.g., USB 2.0) will result in significantly slower speeds.
- Close any unnecessary applications running in the background that might be consuming system resources.

- Verify that your device's drivers are up to date.

Overheating:

- While the SSK SD450 is designed for efficient heat dissipation, prolonged heavy use in a poorly ventilated area can still cause warmth. Ensure adequate airflow around the device.
- If the device becomes excessively hot, disconnect it and allow it to cool down before resuming use.
