## 7. TROUBLESHOOTING

If you encounter issues with your PVWIIK Full Loft Bed, refer to the following common problems and solutions:

Problem	Possible Cause	Solution
Bed feels wobbly or unstable.	Loose bolts or screws; uneven floor; improper assembly.	Re-tighten all bolts and screws. Ensure the bed is on a level surface. Verify all assembly steps were followed correctly. Consider anchoring the bed to a wall for added stability if suitable for your wall type.
Parts do not fit together.	Incorrect orientation of parts; mislabeled parts.	Double-check the assembly manual for correct part orientation. If parts appear mislabeled, try fitting them based on their physical shape and the diagrams. Contact customer service if issues persist.
Squeaking noises.	Loose connections; metal-on-metal friction.	Tighten all bolts and screws. Apply a small amount of lubricant (e.g., silicone spray) to metal-on-metal contact points if necessary, ensuring it does not affect the finish.

If you experience any issues not listed here or require further assistance, please contact PVWIIK customer service.
