## 5. TROUBLESHOOTING

---

This section addresses common issues you might encounter during assembly or use.

### 5.1. Assembly Issues

- **Hole Alignment Difficulties:** If holes for metal braces or the base do not align perfectly, try loosening adjacent screws slightly. Sometimes, rotating a piece 180 degrees can help. Start by inserting a few screws loosely on opposite sides, then gradually tighten all screws. Patience is key during this process.
- **Loose Connections:** Ensure all screws and fasteners are tightened securely. If using power tools, use a low torque setting to prevent stripping screws or damaging the wood.

### 5.2. Stability Concerns

- **Wobbling Table:** Check that all assembly components are correctly installed and tightened. Ensure the table is placed on a flat, even surface. The base includes plastic buffers to prevent floor scratches and aid stability.

### 5.3. Safety Note

Assembly may require careful handling of parts to avoid injury. Always follow the provided instructions for safe assembly and use.
