OPERATING INSTRUCTIONS

The Pro Breeze Osmo dehumidifier begins to collect humidity immediately upon tablet installation. No power button or settings are required.

- **Monitoring Water Level:** The transparent window on the front of the unit allows you to monitor the collected water level. The water level indicator shows markings for 500ml, 750ml, and FULL.
- **When to Empty:** Empty the water reservoir when the indicator reaches the 'FULL' mark. The absorption process will automatically stop once the maximum capacity of 1.3 liters is reached.
- **Tablet Lifespan:** The 700g absorption tablet can last up to 100 days, depending on the humidity levels and room size. The tablet will gradually dissolve as it absorbs moisture.

TROUBLESHOOTING

- **No Water Collected:**
 - Ensure the absorption tablet is correctly installed.
 - Check the humidity level in the room. If humidity is very low, less water will be collected.
 - Verify that the unit is not placed in an area with strong airflow that might reduce its effectiveness.
- **Slow Water Collection:**

- The rate of water collection depends on the ambient humidity and temperature. Higher humidity and temperature will result in faster collection.
- Ensure the tablet is not fully dissolved. Replace if necessary.
- **Unpleasant Odor:**
 - Empty and clean the water reservoir regularly to prevent bacterial growth.
 - Ensure the tablet is fresh.
