Key Assembly Steps:

1. **Unpack and Identify Parts:** Carefully remove all components from the packaging and lay them out on a clean, soft surface. Refer to the parts list to ensure everything is present.
2. **Attach Side Rails to Headboard:** Secure the side rails to the headboard using the provided bolts and washers. Do not fully tighten until all major components are connected.
3. **Attach Footboard:** Connect the footboard to the side rails.
4. **Install Center Support Beam:** Attach the metal center support beam and its adjustable legs. Ensure the legs are adjusted to touch the floor for optimal support.
5. **Place Wooden Slats:** Lay the wooden slats across the bed frame. The slats are connected by Velcro for easy positioning and to reduce noise. Ensure they are evenly spaced and securely attached to the Velcro strips on the side rails.
6. **Final Tightening:** Once all components are in place, securely tighten all bolts and screws.

Operating Instructions

Adjustable Headboard Height

The headboard of your WEUP bed frame is designed with three adjustable height levels to accommodate mattresses ranging from 8 to 12 inches thick. This allows you to customize the headboard's position to suit your mattress and preference.

- To adjust the headboard height, loosen the bolts connecting the headboard to the side rails.
- Carefully slide the headboard up or down to the desired position.
- Ensure the headboard is level and then re-tighten the bolts securely.

Mattress Placement

Place your mattress directly onto the wooden slats. A box spring is not required for this bed frame. Ensure the mattress is centered on the frame.

Maintenance

Fabric Care

- For general cleaning, gently vacuum the boucle fabric using an upholstery attachment to remove dust and debris.
- For spills, blot immediately with a clean, dry cloth. Do not rub, as this can spread the stain.
- For stubborn stains, use a mild fabric cleaner specifically designed for upholstery. Test on an inconspicuous area first.
- Avoid direct sunlight exposure for prolonged periods to prevent fading.

Frame Care

- Periodically check all bolts and connections to ensure they remain tight. Re-tighten as needed to maintain stability

and prevent squeaking.

- Avoid dragging the bed frame when moving it. Lift the frame to prevent damage to the legs and floor.

Troubleshooting

Problem	Possible Cause	Solution
Bed frame is wobbly or unstable.	Loose bolts or uneven support legs.	Ensure all bolts are fully tightened. Adjust the center support legs to ensure they are firmly on the floor.
Squeaking noises from the bed.	Loose connections or slats rubbing.	Re-tighten all hardware. Ensure wooden slats are properly seated and not rubbing against the frame. The bed frame is equipped with quiet foam for noise reduction, but loose parts can still cause sound.
Mattress sags in the middle.	Insufficient center support or damaged slats.	Verify the center support beam and its legs are correctly installed and adjusted. Check wooden slats for any damage or breakage.
Gap between mattress and headboard.	Mattress size incompatibility or headboard not adjusted correctly.	Ensure you are using a Queen size mattress. Adjust the headboard to its highest setting if your mattress is thinner, or consider a thicker mattress (8-12 inches recommended).
