This image displays the KUNFINE Special Wire Harness, featuring a multi-colored wiring loom with various connectors and an integrated black Canbus decoder module. The harness is designed to connect an aftermarket KUNFINE Android radio to the vehicle's electrical system, particularly when an original power amplifier is present.

This wire harness and Canbus decoder is specifically designed for:

- **Vehicle Model:** Buick Enclave (Model Years: 2009-2013)
- **Vehicle Feature:** Must have an original power amplifier.
- **Compatible Radios:** Exclusively supports KUNFINE 10-inch, 10.33-inch, and 13.1-inch Android radios.

Important Note: This Canbus decoder is not compatible with Android radios from other manufacturers. Ensure your radio is a KUNFINE brand unit of the specified sizes before purchasing or attempting installation.

SETUP AND INSTALLATION

Installation of the KUNFINE Special Wire Harness requires careful attention to vehicle wiring. It is recommended that installation be performed by a qualified professional.

Before Installation:

1. Ensure the vehicle's ignition is off and the battery is disconnected to prevent electrical shorts.
2. Verify that the KUNFINE wire harness and Canbus decoder are the correct components for your specific Buick Enclave model (2009-2013) and KUNFINE Android radio.

3. Familiarize yourself with your vehicle's existing wiring diagram, especially concerning the original power amplifier.

Connection Steps:

1. Locate the original radio wiring harness in your Buick Enclave.
2. Connect the KUNFINE Special Wire Harness to the corresponding ports on your KUNFINE Android radio.
