

Front 4K 2160P Model A

ZhuCamX Plug and Play Car Video Recorder User Manual

Model: Front 4K 2160P Model A | **Brand:** Generic

PRODUCT OVERVIEW

The ZhuCamX Plug and Play Car Video Recorder is designed for seamless integration into compatible vehicles, offering high-definition video recording capabilities. This dash cam provides a discreet, OEM-like appearance without external wires or mounts cluttering the windshield.

Key features include:

- **4K 2160P Video Recording:** Captures clear, detailed footage.
- **Night Vision:** Enhanced visibility in low-light conditions with WDR technology.
- **Integrated Wi-Fi:** Connects to the Viidure APP for easy viewing and downloading of footage.
- **Loop Recording:** Automatically overwrites old footage to ensure continuous recording.
- **G-Sensor:** Detects sudden collisions and locks important footage to prevent overwriting.
- **Plug and Play Installation:** Designed for a straightforward setup without complex wiring.

PACKAGE CONTENTS

Please verify that all items are present in your package:

- ZhuCamX Dash Cam Unit (Model A)
- Plastic Pry Bar
- Plug and Play Cable
- User Manual (this document)

Image: Contents of the package, including the dash cam unit, plastic pry bar, and plug and play cable with wiring diagram.

INSTALLATION GUIDE

This dash cam is designed for a custom fit and plug-and-play installation, minimizing the need for complex wiring. Ensure your vehicle model is compatible before proceeding.

1. Vehicle Compatibility Check

Before installation, confirm the dash cam's compatibility with your specific vehicle model and year. The design is tailored for Great Wall Pao, GWM Poer, Ruman, Sucan, Cannon, Ute P Series, and P-Series models from 2019 to present. Compare your car's rearview mirror area with the provided images to ensure a proper fit.

Image: Various angles showing the vehicle's rearview mirror area before the dash cam installation. This helps confirm compatibility with "Model A".

2. Power Connection (Plug and Play)

The dash cam utilizes a plug-and-play cable for power, typically connecting to existing power sources such as rain sensors or reading light panels. Some models may draw power from anti-glare mirrors, ETC reserved ports, skylights, or other dedicated plugs.

Plug and Play

No damage to install, various ways to take power

Attention: Plug and play cables are generally powered through rain sensors or reading light panels. Some models are powered through anti glare, ETC reserved ports, skylights, and other plugs.

Image: Close-up of the plug-and-play cable connecting to a vehicle's existing wiring harness, demonstrating the ease of power integration. For models requiring a fuse box connection, refer to the diagram below. The fuse required is 10A. You may replace an existing fuse or connect directly to the appropriate wires:

- **Black wire (GND):** Connect to any metal part of the car chassis for ground.
- **Red wire (ACC):** Connect to a 12V source that receives power when the ignition is on (e.g., cigarette lighter, radio).
- **Yellow Wire (B+):** Connect to a 12V source that provides constant power, even when the car is off (e.g., for small lights, dome light).

Fuse box is under the steering wheel or passenger side, you can reference your manual. Our fuse is 10A.

You can replace your fuse directly in some of cars, you may manual connect the wire (cut the fuse foot of DVR) to the fuse for some of cars too.

Black wire (GND):

You can connect it to any metal parts.

Red wire(ACC):

12V (+), When you insert key into ignition switch. The ACC wire offers power/electricity only when you insert car key into ignition switch and turn it to the left. Such as cigarette lighter, radio etc.

Yellow Wire(B+):

12V (+), This wire will always offer power/electricity even the vehicle is turned off. Such as ports for small lights/dome light/brake light/emergency flashing lights etc.

Note:

If Yellow wire lost power when your car off, DVR will lost all setting, including date/time etc.

Image: Diagram illustrating how to connect the dash cam's power wires to the vehicle's fuse box, with explanations for each wire type (GND, ACC, B+).

Note: If the yellow wire loses power when the car is off, the DVR may lose its settings, including date/time.

3. Mounting the Dash Cam

The dash cam is designed for rearview mirror mounting, integrating seamlessly with the vehicle's interior. Use the provided plastic pry bar to carefully open panels if necessary for cable routing and secure fitting.

Image: Various angles showing the vehicle's rearview mirror area after the dash cam installation, demonstrating its integrated and discreet appearance.

OPERATING INSTRUCTIONS

1. Initial Setup and Wi-Fi Connection

Once installed and powered, the dash cam will automatically begin recording. To access settings, view live footage, or download recordings, connect to the built-in Wi-Fi via the Viidure APP.

1. Download the "Viidure" application from your smartphone's app store.
2. Turn on your car engine to power the dash cam.
3. On your smartphone, go to Wi-Fi settings and connect to the dash cam's Wi-Fi network. The network name and password can typically be found on the device or in the quick start guide.
4. Open the Viidure APP. You can now view live footage, playback recorded videos, and adjust settings such as resolution, loop recording duration, and G-sensor sensitivity.

Note: If you experience issues with live preview, try turning off cellular data and Bluetooth on your smartphone while connected to the dash cam's Wi-Fi.

2. Recording Modes and Features

- **Continuous Loop Recording:** The dash cam continuously records video in short segments (e.g., 1, 3, or 5 minutes). When the memory card is full, the oldest footage is automatically overwritten to make space for new recordings. Supports up to 256GB memory cards.
- **Emergency Accident Locks (G-Sensor):** The built-in G-sensor detects sudden impacts or collisions. When an event is detected, the current video segment is automatically locked and saved to a protected folder, preventing it from being overwritten by loop recording.
- **High Dynamic Range (HDR):** The dash cam utilizes HDR technology to improve image quality in varying light conditions, ensuring clearer recordings during the day, at night, and in challenging weather like rain.

MAINTENANCE

To ensure optimal performance and longevity of your ZhuCamX dash cam, consider the following maintenance tips:

- **Memory Card Management:** Regularly format your memory card (at least once a month) through the Viidure APP or by inserting it into a computer. This helps prevent data corruption and ensures smooth loop recording.
- **Lens Cleaning:** Gently clean the dash cam lens with a soft, lint-free cloth to remove dust or smudges that could affect video clarity. Avoid abrasive materials or harsh chemicals.
- **Firmware Updates:** Check the ZhuCamX official website or the Viidure APP periodically for firmware updates. Keeping the firmware updated can improve performance, add new features, and resolve potential issues.
- **Temperature Control:** Avoid exposing the dash cam to extreme temperatures for prolonged periods. While designed for automotive use, excessive heat or cold can impact its lifespan.

TROUBLESHOOTING

If you encounter issues with your ZhuCamX dash cam, refer to the following common problems and solutions:

Problem	Possible Cause / Solution
Dash cam does not power on.	<ul style="list-style-type: none">• Check the power connection. Ensure the plug-and-play cable is securely connected.• Verify the vehicle's ignition is on if connected to an ACC power source.• If using a fuse box connection, check the 10A fuse.
Wi-Fi connection issues / No live preview in APP.	<ul style="list-style-type: none">• Ensure your smartphone's cellular data and Bluetooth are turned off while connected to the dash cam's Wi-Fi.• Restart the Viidure APP and reconnect to the dash cam's Wi-Fi.• Ensure the dash cam is powered on.
Dash cam loses date/time settings.	<ul style="list-style-type: none">• This typically occurs if the yellow (B+) power wire loses constant power when the car is off. Ensure it is connected to a continuous 12V source.
Footage is not saving or loop recording is not working.	<ul style="list-style-type: none">• Ensure a compatible memory card (up to 256GB) is inserted correctly.• Format the memory card regularly.• Check if the memory card is full with locked files. Transfer or delete unnecessary locked files.
Poor video quality.	<ul style="list-style-type: none">• Clean the dash cam lens.• Ensure the protective film (if any) has been removed from the lens.• Check settings in the Viidure APP to ensure 4K 2160P resolution is selected.

SPECIFICATIONS

Feature	Detail
Model Name	Dash Cam (Front 4K 2160P Model A)
Brand	Generic (ZhuCamX Manufacturer)
Video Capture Resolution	2160p (4K) Front, 1080P Rear (if applicable to variant)
Connectivity Technology	Wi-Fi
Special Features	Loop Recording, Built-In WiFi, G-Sensor, App Control, Built-In Microphone
Mounting Type	Rearview Mirror Mount
Vehicle Service Type	Car
Product Dimensions	8 x 8 x 8 inches (approximate)
Included Components	Crowbar, User Manual
First Available Date	January 22, 2025

WARRANTY AND SUPPORT

ZhuCamX is committed to providing innovative and reliable products for safe driving. All integrated dash cams undergo strict quality inspection.

- **Warranty:** This product comes with a 12-month (one year) warranty from the date of purchase.
- **Technical Support:** For any usage or installation problems, please contact ZhuCamX customer service. Prompt response technical support is available to ensure an optimal user experience.

Please retain your proof of purchase for warranty claims.
