3. SETUP AND INSTALLATION

The jojofuny Water Heater Prefilter is designed for easy installation. It can be connected inline with various water-using appliances.

Before Installation:

- Ensure the main water supply to the installation area is turned off.
- Gather necessary tools (e.g., wrench, thread sealant if required).
- Confirm the filter's inlet and outlet connections match your existing plumbing.

Installation Steps:

1. Identify the water inlet line of the appliance you wish to protect (e.g., water heater, washing machine, shower head).
2. Disconnect the existing water line from the appliance's inlet.
3. Connect the inlet side of the jojofuny prefilter to the main water supply line. Ensure connections are secure and watertight.
4. Connect the outlet side of the jojofuny prefilter to the appliance's water inlet. Ensure connections are

secure and watertight.

5. Slowly turn on the main water supply and check for any leaks. Tighten connections if necessary.
6. Allow water to flow through the filter for a few minutes to flush out any air or loose particles.

4. OPERATING INSTRUCTIONS

The jojofuny Water Heater Prefilter operates passively once installed. It continuously filters water as it passes through the unit.

- No electrical power is required for operation.
- The clear housing allows for visual monitoring of the filter element. As impurities accumulate, the filter element will change color, indicating it's time for replacement.
- The filter is designed to not significantly affect water flow.

5. MAINTENANCE

Regular maintenance, primarily filter element replacement, is crucial for the continued effectiveness of your prefilter.

Filter Element Replacement:

The PP cotton filter element is consumable and needs to be replaced periodically. The frequency of replacement depends on the quality of your incoming water and the volume of water filtered.

DURABLE

Clear white shell design, you can observe the use of the filter effect at any time and replace it with a new filter elements.

Image: A collage demonstrating the clear shell design, which allows users to visually inspect the filter element's condition and determine when replacement is needed.

When to Replace:

- When the filter element appears visibly dirty or discolored.
- If you notice a significant decrease in water flow through the filter.
- Typically every 3-6 months, or as needed based on water quality.

Replacement Steps:

1. Turn off the main water supply to the prefilter.
2. Carefully unscrew the clear housing from the top unit. There might be residual water inside, so have a towel ready.
3. Remove the old PP cotton filter element.
4. Insert a new, clean PP cotton filter element into the housing.
5. Screw the clear housing back onto the top unit, ensuring it is securely tightened to prevent leaks. Do not overtighten.
6. Slowly turn on the main water supply and check for leaks.
7. Allow water to flow for a few minutes to flush the new filter.

6. TROUBLESHOOTING

Problem	Possible Cause	Solution
Reduced Water Flow	Clogged filter element.	Replace the filter element.
Water Leaks from Connections	Loose connections or damaged seals.	Ensure connections are tight. Check for damaged O-rings or threads and replace if necessary.
