OPK 6020

OPK 6020 Men's Stainless Steel Chronograph Watch Instruction Manual

Model: 6020

INTRODUCTION

Thank you for choosing the OPK 6020 Men's Stainless Steel Chronograph Watch. This sophisticated timepiece combines elegant design with precise functionality, featuring a chronograph, date display, and water resistance. This manual provides essential information for setting up, operating, maintaining, and troubleshooting your watch to ensure optimal performance and longevity.

SAFETY INFORMATION

- Avoid exposing the watch to extreme temperatures (above 60°C or below 0°C) or sudden temperature changes.
- Keep the watch away from strong magnetic fields, as these can affect the accuracy of the quartz movement.
- Protect the watch from severe impacts or drops.
- Do not operate the crown or pushers while the watch is wet or submerged in water to prevent water ingress.
- Clean the watch regularly with a soft, dry cloth. For water-resistant models, a slightly damp cloth can be used, followed by drying.

SETUP AND INITIAL ADJUSTMENT

1. Setting the Time

1. Pull the crown out to **Position 2** (the outermost position). The second hand will stop.
2. Rotate the crown to move the hour and minute hands clockwise until the desired time is set. Ensure to consider AM/PM for the date change mechanism.
3. Push the crown back in to **Position 0** (the normal operating position). The second hand will resume movement.

2. Setting the Date

1. Pull the crown out to **Position 1** (the first click).
2. Rotate the crown to adjust the date. Rotate clockwise or counter-clockwise depending on the movement.
3. Once the correct date is displayed, push the crown back in to **Position 0**.

3. Adjusting the Bracelet

The stainless steel link bracelet can be adjusted to fit your wrist comfortably. This typically involves removing or adding links. For precise adjustment, it is recommended to visit a professional jeweler or watch repair service. Improper adjustment can damage the bracelet or watch.

OPERATING THE CHRONOGRAPH

The OPK 6020 features a precise chronograph function with three sub-dials and a tachymeter bezel for measuring elapsed time and speed.

- **Start/Stop Button:** The pusher located at the 2 o'clock position (top pusher) starts and stops the chronograph.
- **Reset Button:** The pusher located at the 4 o'clock position (bottom pusher) resets the chronograph hands to zero when the chronograph is stopped.
- **Sub-dials:** The three sub-dials typically measure chronograph seconds, chronograph minutes, and a 24-hour indicator or 1/10th of a second. Refer to the specific dial markings for exact functions.
- **Tachymeter Bezel:** The scale on the outer bezel can be used to measure speed over a known distance (e.g., 1 kilometer or 1 mile). Start the chronograph at the beginning of the distance and stop it at the end. The number on the tachymeter scale corresponding to the chronograph second hand indicates the speed in units per hour.

MAINTENANCE AND CARE

1. Cleaning

Wipe the watch case and bracelet regularly with a soft, lint-free cloth to remove dust and fingerprints. For stubborn dirt, a slightly damp cloth can be used, ensuring the crown is fully pushed in. Dry thoroughly afterwards.

2. Water Resistance

The OPK 6020 watch is rated as "30 meters life waterproof." This means it is resistant to splashes, rain, and brief immersion in water. It is **not suitable** for swimming, diving, or showering, as water pressure and steam can compromise the seals. Always ensure the crown is fully pushed in before any contact with water.

Image: The watch shown with water splashes, illustrating its 30-meter water resistance for daily use.

3. Crystal Care

The watch features a high hardness coated mineral crystal, designed to resist scratches. While durable, avoid direct impacts or abrasive materials that could damage the crystal surface.

Image: A close-up view of the watch's crystal, highlighting its high hardness coating for scratch resistance.

4. Luminous Display

The watch hands and markers feature a luminous coating that absorbs light and glows in the dark, providing visibility in low-light conditions. The intensity and duration of the glow depend on the exposure to light.

WATCH PARAMETERS

MOVEMENT: quartz movement	WATERPROOF: 30 Meter waterproof
STRAP: Precision steel strap	WATCH BUCKLE: Folding watch buckle
MIRROR SURFACE: wear-resistant and scratch-resistant glass	THICKNESS OF CASE: 11.5mm
BAND WIDTH: 20mm	DIAL DIAMETER: 40mm
BAND CIRCUMFERENCE: 23cm	WEIGHT: 137g

Note: All dimensions are measured by hand, and there will be some errors.
Please refer to the real thing.

5. Battery Replacement

The OPK 6020 watch is powered by a battery. When the watch stops or its functions become erratic, the battery may need replacement. It is highly recommended to have the battery replaced by a qualified watch technician to ensure proper sealing and maintain water resistance.

TROUBLESHOOTING

Problem	Possible Cause	Solution
Watch not running	Crown not pushed in; depleted battery.	Ensure crown is in Position 0. If still not running, battery may need replacement by a professional.
Date not changing at midnight	Time set incorrectly (AM/PM).	Advance the time by 12 hours.
Chronograph hands not resetting to zero	Chronograph not stopped; internal issue.	Ensure chronograph is stopped before pressing the reset button. If issue persists, seek professional service.

Problem	Possible Cause	Solution
Water inside watch	Crown/pushers operated underwater; seals compromised.	Immediately take the watch to a professional for inspection and repair to prevent further damage.

SPECIFICATIONS

Feature	Detail
Model Number	6020
Movement	Quartz Chronograph
