SETUP AND INSTALLATION

The SAFE LOCK Athens Knob is designed for easy installation on standard doors. A screwdriver (not included) is the only tool required.

Door Compatibility

- Fits standard size doors 1-3/8" to 1-3/4" thick.
- Adjustable latch backset from 2-3/8" to 2-3/4" (though a dummy knob does not use a latch, this specification refers to the mounting plate compatibility).

Installation Steps

1. **Prepare the Door:** Ensure the door has the standard bore hole for a doorknob. For a dummy knob, no latch bore is required, but the face bore for the knob itself must be present.
2. **Position the Knob:** Place the dummy knob assembly onto the door, aligning the mounting holes with the pre-drilled holes in the door.
3. **Secure the Knob:** Using the provided screws, attach the knob to the door. Tighten the screws firmly but do not overtighten to avoid damaging the door or the knob.
4. **Test Installation:** Gently pull and push the knob to ensure it is securely fastened and does not wobble.

OPERATING INSTRUCTIONS

The SAFE LOCK Athens Knob Single Side Dummy is a non-functional knob designed for decorative purposes or for doors that do not require a latching mechanism, such as closet doors or cabinet doors. It does not turn, lock, or latch.

- To open or close the door, simply pull or push the knob.
- The knob provides a stable grip for manual door operation.

MAINTENANCE

To ensure the longevity and appearance of your SAFE LOCK Athens Knob, follow these simple maintenance guidelines:

- **Cleaning:** Wipe the knob regularly with a soft, damp cloth. Avoid abrasive cleaners, harsh chemicals, or polishing agents, as these can damage the satin nickel finish.
- **Inspection:** Periodically check the screws for tightness. If the knob feels loose, gently tighten the screws with a screwdriver. Do not overtighten.

- **Avoid Impact:** Protect the knob from heavy impacts or scratches to preserve its finish.

TROUBLESHOOTING

Most issues with a dummy knob are minor and can be resolved easily.

- **Knob is Loose:** If the knob feels wobbly, check the mounting screws. Use a screwdriver to tighten them until the knob is secure.
- **Knob Does Not Sit Flush:** Ensure that the door surface is flat and that no debris is caught between the knob's base plate and the door. Re-check screw alignment.
- **Scratches or Finish Damage:** Minor scratches can sometimes be buffed out with a very fine, non-abrasive cloth. For significant damage, consider replacement.
