Setup

The G63 Gaming Headset connects via a 3.5mm audio jack for sound and microphone, and a USB plug for the LED lighting. Follow these steps to set up your headset:

1. **Connect the 3.5mm Audio Jack:**
    - For PC/Laptop: Plug the 3.5mm jack into the audio output/headset port on your computer. If your PC has separate ports for audio and microphone, you may need a 3.5mm splitter (not included).
    - For PS4/PS5 Controller: Plug the 3.5mm jack directly into the controller's headset port.
    - For Xbox One S Controller: Plug the 3.5mm jack directly into the controller's headset port.
    - For Older Xbox One Controllers: An additional Microsoft Adapter (not included) is required to connect the headset.

2. **Connect the USB Plug (for LED Lights):**
   Plug the USB connector into any available USB port on your PC, console, or a USB power adapter. This connection is solely for powering the LED lights on the earcups.
3. **Adjust Headset Fit:** Extend or retract the headband to ensure a comfortable and secure fit on your head. The earmuffs should fully cover your ears.
4. **Position the Microphone:** Adjust the flexible microphone arm to bring the microphone close to your mouth for optimal voice pickup.

Operating Instructions

Once connected, you can begin using your Xuevcn G63 Gaming Headset. Here are the primary operating functions:

- **Volume Control:** Locate the volume wheel on the left earcup. Rotate the wheel upwards to increase volume and downwards to decrease volume.
- **Microphone Usage:** The microphone is always active when plugged in. Ensure it is positioned correctly near your mouth for clear communication. There is no dedicated mute button on the headset itself. Microphone muting must be managed through your device's audio settings or in-game options.
- **LED Lights:** The LED lights on the earcups will illuminate automatically when the USB plug is connected to a powered USB port. These lights are purely for aesthetic purposes and do not affect audio performance.
