Setup and Assembly Instructions

Assembly is designed to be straightforward and typically takes about 30 minutes with two people. Follow these steps carefully.

Step 1: Attach Headboard to Side Rails

1. Unpack the headboard and side rails.
2. Align the pre-drilled holes on the headboard with the corresponding holes on the side rails.
3. Securely fasten using the provided bolts and Allen wrench. Do not overtighten.

Step 2: Assemble Footboard and Connect to Side Rails

1. Attach the footboard to the other end of the side rails using the provided hardware.
2. Ensure all connections are snug but allow for minor adjustments before final tightening.

Step 3: Install Center Support Beam and Legs

1. Attach the center support beam to the designated brackets on the headboard and footboard.
2. Screw the support legs into the center support beam. Adjust leg height if necessary to ensure even contact with the floor.

Step 4: Place Wooden Slats

1. Unroll or place the wooden slats across the bed frame. Many slats are connected by Velcro for quick assembly.
2. Ensure slats are evenly spaced and secured to the side rails or center beam as indicated in the specific hardware.
3. The EVA muting bar on the slats helps minimize noise and prevents mattress sliding.

1. Once all components are in place, go back and fully tighten all bolts and screws.
2. Ensure the bed frame is stable and level.

Troubleshooting

Problem	Possible Cause	Solution
Bed frame is wobbly or unstable.	Loose bolts or screws. Uneven floor.	Ensure all hardware is securely tightened. Check if the floor is level; use shims under legs if necessary.
Squeaking noises.	Loose connections. Friction between components.	Tighten all bolts. Ensure slats are properly seated. The EVA muting bar should prevent most noise.
Mattress slides on slats.	Lack of friction.	Ensure the EVA muting bar is correctly positioned. Consider using a non-slip mattress pad.
