TROUBLESHOOTING

Cabinet feels unstable:

Ensure the anti-tip kit is correctly installed and secured to a wall stud. Verify that the cabinet is placed on a level surface and all assembly fasteners are tightened.

Drawers are stiff or noisy:

Check for any obstructions in the drawer glides. Ensure the drawers are assembled correctly and the safe-stop device is not impeding movement. A small amount of silicone lubricant can be applied to the glides if needed.

Doors do not align properly:

Adjust the hinges on the doors. Most hinges allow for minor adjustments to align the doors vertically, horizontally, and in depth.
