1. **Prepare the Vacuum:** Turn off and unplug your Ultenic AC1 Wet Dry Vacuum Cleaner.
2. **Access the Brush Compartment:** Locate the brush compartment cover on the underside of your vacuum cleaner. Refer to your vacuum cleaner's user manual for specific instructions on how to open this compartment.
3. **Remove the Old Brush:** Carefully unlatch or slide out the worn or damaged main roller brush. Dispose of the old brush responsibly.
4. **Insert the New Brush:** Align the new Main Roller Brush with the slots or guides in the brush compartment. Gently push it into place until it clicks securely. Ensure both ends of the brush are properly seated.
5. **Close Compartment:** Close the brush compartment cover, ensuring it is latched securely.
6. **Test:** Plug in and turn on your vacuum cleaner to confirm the new brush operates correctly.

## OPERATION

---

Once installed, the Main Roller Brush operates automatically as part of your Ultenic AC1 Wet Dry Vacuum

Cleaner's cleaning system. It is designed to rotate at high speed, agitating dirt and debris from surfaces and directing them into the vacuum's suction path.

- Ensure the brush spins freely before and after each use.
- Avoid vacuuming large, hard objects that could damage the brush bristles or the vacuum cleaner.

## MAINTENANCE

---

Regular maintenance of your Main Roller Brush will ensure optimal cleaning performance and extend its lifespan. It is recommended to inspect the brush periodically, especially after cleaning heavily soiled areas.

1. **Inspect for Debris:** Regularly check the roller brush for tangled hair, threads, or other debris. These can reduce cleaning efficiency and put strain on the vacuum motor.
2. **Clean the Brush:** If debris is present, carefully remove the roller brush (refer to the "Installation" section for removal steps). Use scissors or a brush cleaning tool to cut and remove tangled hair and fibers from the bristles.
3. **Rinse (if applicable):** If your vacuum cleaner model allows for wet cleaning of the roller brush, rinse it under running water. Ensure it is completely dry before re-installing to prevent mold or damage to the vacuum.
4. **Check for Wear:** Over time, bristles may become worn or flattened. If the brush is no longer effectively agitating surfaces, it may be time for a replacement.
