## MAINTENANCE

### Cleaning the Upholstered Headboard:

- For general cleaning, gently vacuum the fabric surface using an upholstery attachment to remove dust and debris.
- For spills, blot immediately with a clean, dry cloth. Do not rub, as this can spread the stain.
- For stubborn stains, consult a professional upholstery cleaner or use a mild fabric cleaner specifically designed for upholstered furniture, testing on an inconspicuous area first.

### Care for Wooden Slats and Frame:

- Periodically check all screws and bolts to ensure they are tight. Re-tighten if necessary to maintain stability and prevent squeaking.

- Wipe down the wooden slats and metal frame components with a damp cloth to remove dust. Avoid harsh chemicals or abrasive cleaners.
- Ensure the mattress is properly centered on the slats to distribute weight evenly and prevent damage to the frame.

## TROUBLESHOOTING

---

### Squeaking Noises:

The bed frame is designed with an anti-noise bar. If squeaking occurs, first ensure all assembly bolts and screws are securely tightened. Check that the wooden slats are properly seated and not rubbing against the frame. Ensure the mattress is not shifting excessively.

### Charging Ports Not Working / High-Pitch Sound:

Ensure the charging station is correctly plugged into a functional power outlet. If a high-pitch sound is heard when using the charging ports, try using a different device or power adapter to isolate the issue. If the problem persists, discontinue use and contact customer support.

### Mattress Shifting:

The frame design helps keep the mattress in place. If your mattress is shifting, ensure it is correctly sized for the King frame (85"L x 76"W). Verify that all frame components are properly assembled and level.
