MAINTENANCE

Proper maintenance will extend the life and appearance of your wood pergola.

- **Cleaning:** Regularly clean the wood frame with a soft cloth and mild soap solution. Rinse thoroughly with water and allow to air dry. Avoid harsh chemicals or abrasive cleaners.
- **Wood Care:** As the pergola is made of Fir Wood, consider applying a wood sealant or stain annually to protect it from weathering, UV damage, and moisture. This will help maintain its color and structural integrity.
- **Fastener Check:** Periodically check all screws, bolts, and anchors to ensure they are tight. Re-tighten as necessary to maintain structural stability.
- **Winterization:** In areas with heavy snow or extreme weather, it is advisable to remove any climbing plants that could add excessive weight to the structure. While the pergola is designed for stability, extreme conditions can cause damage.

- **Water Exposure:** Note that this pergola is **not water resistant**. Prolonged exposure to rain can affect the wood. Consider additional protective measures if consistent wet conditions are expected.

TROUBLESHOOTING

- **Pergola feels unstable:** Ensure all posts are securely anchored to the ground using the provided expansion screws and ground stakes. Verify that all bolts and screws connecting the beams and posts are tightened.
- **Wood warping or cracking:** Wood is a natural material and can react to environmental changes. Ensure proper wood care, such as sealing or staining, is applied regularly. Minor warping is normal, but significant issues may require professional assessment.
- **Difficulty with climbing plants:** If plants are not climbing as desired, ensure they are properly guided and have adequate support. The trellis design is intended to facilitate plant growth.
