5. SAFETY INFORMATION AND WARNINGS

- NOT A VOLTAGE CONVERTER:** This travel adapter is not a voltage converter. It only adapts the plug shape to fit different outlets. Ensure your electronic devices (e.g., hair dryers, straighteners, curling irons) support a wide voltage range (100V-250V) to avoid damage.
- Maximum Power:** Do not exceed the maximum power rating of 2500W for the AC outlet.
- Fuse Protection:** The adapter is equipped with double 10A fuses for protection. If the adapter stops working, check and replace the fuse if necessary.
- Indoor Use Only:** This device is intended for indoor use only.
- Keep Away from Children:** Store the adapter out of reach of children.

6. MAINTENANCE

To ensure the longevity and optimal performance of your TESSAN Universal Travel Adapter, follow these maintenance guidelines:

- **Cleaning:** Disconnect the adapter from the power outlet and all devices before cleaning. Use a soft, dry cloth to wipe the exterior. Do not use liquid cleaners or abrasive materials.
- **Storage:** When not in use, retract all prongs and store the adapter in a cool, dry place, away from direct sunlight and moisture.
- **Inspection:** Periodically inspect the adapter for any signs of damage, such as frayed cables, loose prongs, or cracks in the casing. Do not use a damaged adapter.
- **Fuse Replacement:** If a fuse blows, replace it with a new 10A fuse. Refer to the safety information section for fuse access.

7. TROUBLESHOOTING

If you encounter issues with your TESSAN Universal Travel Adapter, consider the following:

- **No Power Output:**

- Ensure the adapter is fully inserted into the wall outlet.
- Check if the wall outlet is functional by testing it with another device.
- Verify the internal fuse. If it's blown, replace it with a spare 10A fuse.

- **Slow Charging:**

- Ensure you are using a high-quality charging cable.
- For optimal fast charging, use the USB-C3 port individually for compatible devices.
- Charging multiple devices simultaneously will distribute the total power output, potentially slowing down individual device charging.

- **Device Not Charging:**

- Confirm that your device is compatible with the adapter's voltage range (100V-250V).
- Ensure the total power consumption of all connected devices does not exceed 2500W.
- Try connecting your device to a different port on the adapter.
