8. TROUBLESHOOTING

Before contacting customer support, please refer to the following troubleshooting guide:

Problem	Possible Cause	Solution
Dehumidifier does not turn on.	Unit not plugged in. Power outlet not working. Water tank is full or not properly seated.	Ensure the power cord is securely plugged into a grounded outlet. Test the outlet with another appliance. Empty the water tank and ensure it is correctly reinserted.
No water collected or low dehumidification.	Room humidity is too low. Temperature is too low (below 41°F / 5°C). Air inlet/outlet blocked. Unit size is too small for the room.	Dehumidifier will not collect water if humidity is already low. Operate the unit in temperatures above 41°F (5°C). Ensure there is sufficient clearance around the unit.
