SETUP INSTRUCTIONS

1. Unpacking and Placement

Carefully remove the air mattress from its packaging. Unroll the mattress on a clean, flat surface free from sharp objects. Ensure there is sufficient space around the mattress for inflation.

2. Inflation

Locate the built-in AC electric pump. Open the cover to access the power cord. Plug the power cord into a standard 110-120V AC electrical outlet. Turn the dial on the pump to the "Inflate" position (indicated by an upward arrow). The mattress will begin to inflate automatically. Inflation time is approximately 2 minutes for the Twin size.

HORIZONTAL Beams

Settle in on comfortable, reinforced interior beams that contour to your body in all the right places.

Image: Detail of the built-in electric pump on the side of the mattress, showing the inflate/deflate dial.

3. Initial Material Stretch

Upon first inflation, the material of the air mattress will naturally stretch. This may cause a perceived loss of pressure. This is normal and not a sign of a leak. Simply re-inflate the mattress to your desired firmness. The material will fully settle within 2-3 nights of use.

OPERATING THE AIR MATTRESS

Comfort and Support Features

- **Dura-Beam Technology:** Designed with a unique edge construction, Dura-Beam Air Mattresses resist sagging and are significantly more durable and supportive than traditional airbeds.
- **Fiber-Tech Construction:** Thousands of high-strength polyester fibers provide enhanced support and comfort, contouring to your body for supreme rest.
- **Pillow Top Construction:** A luxurious dual-layer air pocket system reduces pressure points, ensuring a great night's sleep.

Deflation and Storage

To deflate the mattress, plug the pump into an electrical outlet and turn the dial to the "Deflate" position (indicated by a downward arrow). The pump will quickly remove air from the mattress. Once deflated, fold the mattress neatly and store it in the included carry bag for easy transport and protection.

MAINTENANCE

Cleaning

To clean the air mattress, spot clean only. Do not machine wash or submerge in water.

Addressing Material Stretch

As mentioned in the setup, the mattress material will stretch during initial use. If the mattress feels softer than desired after a few nights, simply add more air using the built-in pump until the preferred firmness is achieved. This is a normal characteristic of the material and not a defect.

TROUBLESHOOTING

Mattress Appears to Lose Air

If the mattress seems to be losing air, first consider the natural stretching of the material during the first 2-3 nights of use. This is the most common reason for perceived air loss. Re-inflate the mattress to your desired firmness. If the issue persists after several re-inflations, inspect the mattress for any punctures or leaks. A repair patch kit may be included with your product for minor repairs.

SPECIFICATIONS

Feature	Detail
Brand	Intex
Model Name	Intex Dura-Beam Deluxe Comfort Plush Air Mattress
Model Number	67765ED
Size	Twin (75"L x 39"W x 13"Th)
