Step-by-Step Assembly:

- 1. Unpack and Identify Parts:** Carefully unpack all components from the box. Lay them out on a clean, soft surface to identify each part using the provided labels (A, B, C, D, E, F, G, H, J) and the hardware kit.
- 2. Assemble the Main Frame:** Connect the frame sections (A, B, C, D, E, F) using the appropriate bolts and nuts from the hardware kit. Ensure all connections are secure but do not fully tighten bolts until the entire frame is assembled. Pay attention to the 'UP' labels on certain parts to ensure

correct orientation.

3. **Install Center Support:** Attach the center support bar (H) to the main frame, aligning it with the designated connection points. Secure with bolts and nuts.
4. **Insert Slats:** Place the metal slats (G) into the designated slots on the frame. Press down firmly to ensure they are securely seated. The dense arrangement of 13 slats provides robust support.
5. **Final Tightening:** Once all frame sections and slats are in place, go back and fully tighten all bolts using the provided tools. Ensure the frame is stable and level.
6. **Apply Fabric Cover:** Drape the black fabric cover (J) over the assembled metal frame. The cover is designed to fit snugly, similar to a fitted sheet, concealing the metal structure and providing a finished look.

7. MAINTENANCE & CARE

- **Cleaning the Cover:** The fabric cover is removable. If it gets stained, carefully remove it and spot clean with a mild detergent and damp cloth. Allow it to air dry completely before reattaching.
- **Frame Inspection:** Periodically check all bolts and connections to ensure they remain tight. Retighten if necessary to maintain stability and prevent noise.
- **Avoid Harsh Chemicals:** Do not use abrasive cleaners or harsh chemicals on the metal frame or fabric cover, as this may damage the finish or material.

8. TROUBLESHOOTING

- **Noise/Squeaking:** If you experience any noise, ensure all bolts are fully tightened. The design incorporates mute foam strips and U-shaped grooves to prevent squeaking, but loose connections can still cause sound.
- **Uneven Surface:** If the box spring appears uneven, check that it is placed on a flat surface and that all legs (if applicable, or the bed frame itself) are level.
