### 3. SETUP

#### 3.1 Initial Cleaning

Before first use, wipe down the interior and exterior of the oven with a damp cloth. Ensure the pizza stone is clean and dry before placing it inside the oven. Do not immerse the pizza stone in water or use soap, as it is porous and can absorb liquids.

#### 3.2 Assembling the Pizza Peel

Attach the wooden handle to the metal pizza peel using the provided screw and wing nut. Ensure it is securely fastened before use.

#### 3.3 First-Time Preheating (Burn-Off)

For the first use, it is recommended to perform a burn-off cycle to eliminate any manufacturing residues. Place the pizza stone inside the oven. Power on the oven and set it to the highest temperature (840°F) in Manual mode. Allow

it to preheat for 20 minutes, then set a timer for 15 minutes. This process helps to season the stone and remove any odors. Ensure adequate ventilation during this process.

## 4.2 Preset Pizza Modes

The oven offers five convenient preset modes for different pizza styles, plus a Manual setting for full customization:

Menu	Default Upper Tube Temp	Default Under Tube Temp	Default Time
MANUAL	840°F	840°F	90 Seconds
NEAPOLITAN	750°F	750°F	2 Minutes
THIN CRUST	520°F	630°F	6 Minutes
PAN PIZZA	430°F	650°F	12 Minutes
NEW YORK	470°F	520°F	8 Minutes
FROZEN	470°F	400°F	14 Minutes

To select a mode, simply press the corresponding button on the control panel. The oven will automatically adjust the temperature and time settings. You can further customize these settings using the '+' and '-' buttons.

### 4.3 Loading and Unloading Pizza

Once the oven is preheated and your pizza is prepared, use the pizza peel to carefully slide the pizza onto the hot pizza stone inside the oven. Close the door and press the 'Start' button. When cooking is complete, use the pizza peel to remove the hot pizza from the oven. For best results, ensure the pizza stone is adequately preheated to achieve a crispy crust.

## 5. SAFETY FEATURES

Your Azmsary Pizza Oven is designed with safety in mind:

- **Cool-Touch Housing:** Despite internal temperatures reaching 840°F, the exterior housing remains cool to the touch (approx. 170°F), making it safe for use around children.
- **Cool-Touch Handle:** The oven handle maintains a safe temperature (approx. 120°F) for comfortable operation.

- **Double-Layer Insulated Window:** Reduces heat loss and exterior surface temperature.

## 6. MAINTENANCE AND CLEANING

Always unplug the oven and allow it to cool completely before cleaning. Wipe the exterior with a damp cloth. For the pizza stone, scrape off any excess food residue with a spatula or brush. Do not use soap or immerse the stone in water. For stubborn stains, you may gently scrub with a dry brush. The interior metal surfaces can be wiped with a damp cloth. Avoid abrasive cleaners or scouring pads.

## 7. TROUBLESHOOTING

### 7.1 Timer Setting for First Use

Some users have reported confusion with the timer setting during the initial burn-off process. When preparing the oven for the first time, after setting the desired temperature (e.g., 840°F in Manual mode), you need to set the timer for 15 minutes. The oven will then preheat, beep when ready, and automatically begin the 15-minute countdown.

This ensures any manufacturing residues are properly burned off before cooking food.
