## Installation Instructions

Replacing your vacuum cleaner filters is a straightforward process. Follow these steps for proper installation:

1. **Power Off and Unplug:** Always ensure your vacuum cleaner is turned off and unplugged from the power source before attempting any maintenance or part replacement.
2. **Locate Existing Filters:** Refer to your vacuum cleaner's original manual to identify the exact location of the pre-motor and hygiene filters. These are typically found near the dustbin or at the air exhaust vent.
3. **Remove Old Filters:** Carefully remove the old, dirty filters. Note their orientation to ensure correct placement of the new filters. Dispose of old filters responsibly.
4. **Insert New Pre-motor Filters:** Place the new pre-motor filters (black with blue stripe) into their designated slots. Ensure they fit snugly and are properly seated to prevent air leaks.
5. **Insert New Hygiene Filter:** Install the new hygiene filter (blue, round) into its respective compartment, usually at the air outlet. Ensure it clicks into place if applicable.
6. **Secure Components:** Close any covers or compartments that were opened during the filter replacement process.
7. **Test Vacuum:** Plug in and turn on your vacuum cleaner to ensure it operates correctly and suction power is restored.

## Operating Considerations

Once installed, these filters work continuously to purify the air expelled by your vacuum cleaner and protect its internal mechanisms. For optimal performance, ensure filters are clean and properly seated before each use. Regular cleaning, as detailed in the Maintenance section, will help maintain consistent suction power and air quality.

## Maintenance

To ensure the longevity and effectiveness of your Cloudpower replacement filters, regular cleaning is essential. These filters are washable and reusable, contributing to a more sustainable cleaning routine.

### Washing Instructions:

1. **Remove Filters:** Carefully remove both the pre-motor and hygiene filters from your vacuum cleaner as described in the installation section.

2. **Rinse with Water:** Hold the filters under cool, running water. Gently rinse them until the water runs clear. Do not use detergents or hot water, as this can damage the filter material.
3. **Remove Excess Water:** Gently shake the filters to remove excess water. Do not wring or twist them.
4. **Air Dry Thoroughly:** Place the filters in a well-ventilated area to air dry completely. This may take up to 24-48 hours. **It is crucial that the filters are completely dry before reinstallation to prevent mold growth and damage to your vacuum cleaner.** Do not use a dryer, microwave, or any other heat source to speed up drying.
5. **Reinstall:** Once completely dry, reinstall the filters into your vacuum cleaner following the installation instructions.

It is recommended to clean your filters every 2-4 weeks, depending on usage, and replace them every 3-6 months for optimal performance and air quality.

## Troubleshooting

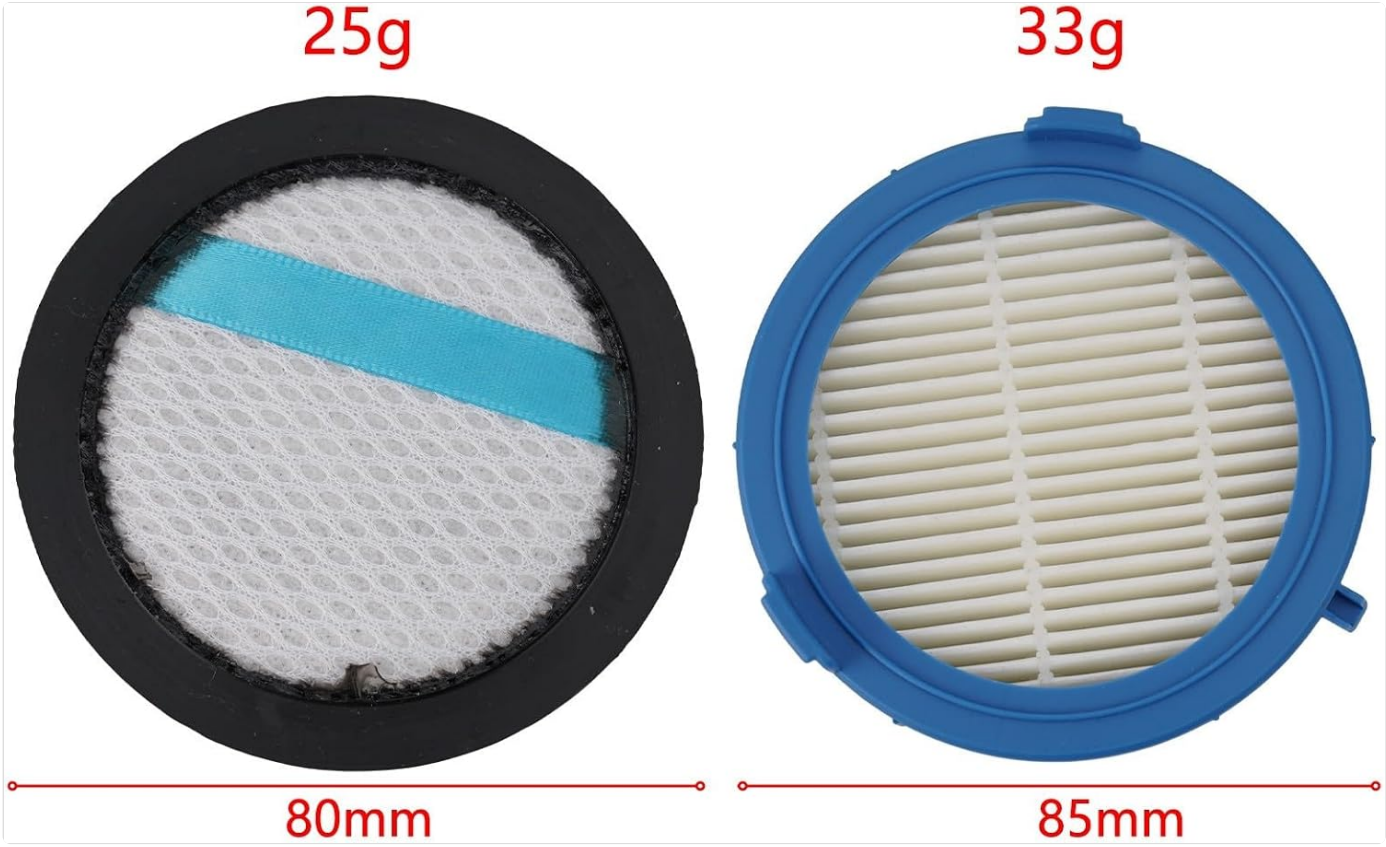

If you experience issues after installing your new filters, consider the following common solutions:

- **Reduced Suction Power:**
  - Ensure filters are completely dry before reinstallation. Damp filters can restrict airflow.
  - Check if filters are correctly seated and no air gaps are present.
  - Verify that the dustbin is empty and not overfilled.
  - Inspect the vacuum cleaner's hoses and attachments for blockages.
- **Unusual Odor from Vacuum:**
  - Filters may not have been completely dry when reinstalled, leading to mold or mildew. Remove, wash, and thoroughly air dry again.
  - Clean the dustbin and other washable parts of the vacuum cleaner.
- **Filters Don't Fit:**
  - Double-check your vacuum cleaner's model number against the compatibility list in this manual.
  - Ensure you are attempting to install the correct filter type (pre-motor vs. hygiene) in the correct location.

If problems persist, consult your vacuum cleaner's original user manual or contact the vacuum cleaner manufacturer's support.
