2. Safety Information

Please observe the following safety precautions to prevent damage to your PC and ensure your personal safety:

- **Power Supply:** Use only the provided power cable and connect it to a grounded electrical outlet. Do not overload power strips.
- **Ventilation:** Ensure adequate airflow around the PC. Do not block ventilation openings. Maintain at least 10 cm (4 inches) of clear space around all sides.
- **Environment:** Operate the PC in a dry, stable environment away from direct sunlight, heat sources, excessive dust, and moisture.
- **Liquid:** Keep liquids away from the PC. In case of accidental spill, immediately disconnect power and contact support.
- **Servicing:** Do not attempt to open or service the PC yourself. Refer all servicing to qualified personnel.
- **Handling:** Handle the PC with care. Avoid dropping or subjecting it to strong impacts.

3. Initial Setup

3.1 Unboxing

1. Carefully remove the PC from its packaging.
2. Remove any protective films or internal packing materials.
3. Place the PC on a stable, flat surface with good ventilation.

3.2 Connecting Peripherals

Connect your monitor, keyboard, mouse, and other devices to the appropriate ports on the rear and top of the PC.

- **Monitor:** Connect your monitor to the graphics card's HDMI or DisplayPort output. Ensure it's connected to the dedicated graphics card (lower ports), not the motherboard's integrated graphics (upper ports).
- **Keyboard & Mouse:** Connect to any available USB ports.
- **Audio:** Connect speakers or headphones to the audio jacks.
- **Network:** For wired internet, connect an Ethernet cable to the LAN port. For wireless, install the provided USB Wi-Fi adapter into an available USB port.

3.3 Power Connection

1. Connect the power cable to the power supply unit (PSU) input on the rear of the PC.
2. Plug the other end of the power cable into a grounded electrical outlet.
3. Flip the power switch on the PSU to the 'ON' position (usually marked with 'I').

4. Operating Your PC

4.1 First Boot

1. Press the power button on the front or top of the PC.
2. The PC will boot up, and you will see the Windows 11 setup screen.
3. Follow the on-screen instructions to complete the Windows 11 initial setup, including language, region, network connection, and user account creation.

4.2 Drivers and Software

Your Vibox PC comes with Windows 11 Home pre-installed and essential drivers for core components. It is recommended to periodically check for updates:

- **Windows Updates:** Go to Settings > Windows Update to check for and install the latest operating system updates.
- **Graphics Drivers:** For optimal gaming performance, regularly update your AMD Radeon graphics drivers. Visit the official AMD website to download the latest drivers for your RX 9070 GPU.
- **Other Drivers:** For motherboard, chipset, and other component drivers, visit the respective manufacturer's websites if needed.

5. Maintenance

5.1 Cleaning

- **Exterior:** Use a soft, damp cloth to clean the exterior surfaces. Avoid abrasive cleaners.
- **Dust:** Periodically clean dust from the PC's interior, especially from fans and heatsinks, using compressed air. Ensure the PC is powered off and unplugged before cleaning.
- **Airflow:** Ensure all ventilation openings are clear of obstructions to maintain proper airflow and cooling.

5.2 Software Maintenance

- Regularly perform Windows Updates and driver updates as described in Section 4.2.
- Keep your antivirus software up-to-date and perform regular scans.
- Manage your storage by deleting unnecessary files and uninstalling unused programs to maintain performance.

6. Troubleshooting

This section covers common issues and their solutions. If you encounter problems not listed here, please contact customer support.

Problem	Possible Solution
PC does not power on	• Check if the power cable is securely connected to the PC and the wall outlet. • Ensure the PSU switch on the back of the PC is in the 'ON' position. • Try a different power outlet.
No display on monitor	• Ensure the monitor is powered on and connected to the graphics card's output (HDMI/DisplayPort). • Check the monitor's input source settings. • Try a different display cable or monitor if available.

Problem	Possible Solution
PC is running slow	• Check for background applications consuming resources (Task Manager). • Ensure Windows and drivers are up-to-date. • Check for malware/viruses. • Ensure adequate free space on your SSD.
No internet connection	• For wired: Check Ethernet cable connection and router status. • For wireless: Ensure Wi-Fi adapter is installed, drivers are updated, and you are connected to the correct network. Restart your router.
