3. Setup (Installation)

Follow these steps to properly install your Aramox Motorcycle Phone Mount:

1. **Identify Mounting Location:** Choose a suitable location on your motorcycle's handlebar. Ensure it does not obstruct your view, controls, or other essential components. The clamp is designed for handlebars with a diameter between 16-33mm.
2. **Attach the Clamp:** Open the handlebar clamp and position it around the chosen section of the handlebar. Use the provided tools (e.g., Allen wrench) to tighten the screws on the clamp until it is firmly secured. Do not overtighten.

4. **Adjust Initial Angle:** Loosen the adjustment knob on the mount's arm to set the initial desired angle. Once positioned, tighten the knob firmly.
5. **Test Stability:** Before riding, gently shake the mounted phone holder to ensure it is securely attached and does not wobble. Re-tighten any loose connections if necessary.

4. Operating Instructions

Using your Aramox Motorcycle Phone Mount is straightforward:

1. **Inserting Your Phone:** The mount features a telescopic pole mechanism. Gently pull apart the phone-holding claws to create enough space, then carefully place your phone into the mount. The soft rubber pads will grip your phone securely. Ensure your phone is centered and all four corners are held by the claws.

2. **Removing Your Phone:** Gently pull one side of the phone-holding claws to release the phone. Avoid forcing the phone out to prevent damage to the mount or your device.
3. **Adjusting Viewing Angle:** The mount offers 540° three-dimensional rotation. Loosen the adjustment knob on the arm, position your phone to the desired viewing angle (portrait or landscape), and then firmly tighten the knob to lock it in place.
4. **Utilizing Charging Space:** The mount is designed with a reserved space at the bottom, allowing you to connect a charging cable to your phone without obstruction while it is mounted.

5. Maintenance

Regular maintenance ensures the longevity and optimal performance of your phone mount:

- **Cleaning:** Wipe the mount regularly with a soft, damp cloth to remove dust and dirt. Avoid using harsh chemicals or abrasive cleaners.
- **Inspection:** Periodically check all screws and joints for tightness. Re-tighten any loose components to maintain stability.
- **Rubber Pads:** Inspect the soft rubber pads on the claws and the central damping pad for any signs of wear or damage. Replace if necessary to ensure a secure grip and proper damping.
- **Moving Parts:** Ensure the telescopic pole mechanism and rotation joints move smoothly. If they become stiff, a small amount of silicone-based lubricant can be applied, avoiding contact with the rubber pads.

6. Troubleshooting

If you encounter any issues with your Aramox Motorcycle Phone Mount, refer to the following common problems and solutions:

- **Issue: Phone is not held securely or falls out.**
  - **Solution:** Ensure your phone's size is within the compatible range (4.9-7.3 inches). Verify that the telescopic pole mechanism is fully engaged and the claws are gripping the phone firmly. Check if the rubber pads are intact and not worn out.
- **Issue: Mount shakes excessively during rides.**
  - **Solution:** Re-check all mounting screws and the handlebar clamp for tightness. Ensure the clamp is firmly secured to the handlebar and there is no play. Inspect the triple damping components for any visible damage.
- **Issue: Difficulty adjusting the viewing angle.**
  - **Solution:** Loosen the adjustment knob slightly more before attempting to rotate the mount. If it's still stiff, check for any debris obstructing the joint. Ensure the knob is tightened firmly after adjustment.
- **Issue: Charging cable does not fit or is obstructed.**
  - **Solution:** The mount has a reserved charging space. Ensure your phone is positioned correctly within the mount, allowing the charging port to align with the open space.
