## TROUBLESHOOTING

If you encounter any issues while using your Slumi Science Pizza & Slime kit, consider the following

common problems and solutions:

- **Slime is too sticky/liquid:**
  - Ensure you have followed the ingredient measurements precisely as outlined in the manual. Small deviations can significantly affect consistency.
  - Continue mixing for a longer period. Some slime recipes require extensive kneading to activate.
  - If too liquid, try adding a very small amount of the dry activator (e.g., baking soda or corn starch, depending on the recipe) and mix well.
- **Slime is too stiff/crumby:**
  - You may have added too much dry ingredient. Try adding a tiny amount of water (a few drops at a time) and kneading until the desired texture is achieved.
- **Colors are not vibrant:**
  - Ensure you have added enough powder pigment. You can gradually add more until the desired color intensity is reached.
- **Missing components:**
  - Carefully check all packaging materials and the box to ensure no small parts were overlooked.
  - If components are genuinely missing, please contact Liscianigiochi customer support (see "Support" section).
