2. SETUP AND ASSEMBLY

Assembly of the Whitmor 3-Shelf Storage Rack is designed to be straightforward and typically requires no tools. Follow these steps for proper setup:

1. **Unpack Components:** Carefully remove all parts from the packaging. Verify that all components listed in the packing list are present.
2. **Attach Adjustable Feet:** Screw the adjustable feet into the bottom of the four vertical poles. Ensure they are securely tightened but allow for future height adjustments.
3. **Install Lower Pole Sections:** If your unit comes in multiple pole sections, connect the lower sections by screwing them together.
4. **Place Shelf Clips:** For each pole, attach two half-circle plastic clips around the pole at the desired height for the first shelf. Ensure the arrow on each clip points upwards and that both clips snap together securely around the pole at the same groove level. *Tip: Some users find it helpful to tape the clips in place temporarily to prevent them from slipping during shelf installation.*
5. **Slide Shelf onto Clips:** Carefully slide the first wire shelf down over the four poles until it rests firmly on the installed clips. Apply even pressure to ensure the shelf is level and fully seated.
6. **Install Remaining Shelves:** Repeat the process for the remaining shelves, placing clips at your desired heights and sliding the shelves into position. Remember that shelves are adjustable, allowing you to customize the spacing.
7. **Install Upper Pole Sections (if applicable):** If your unit has upper pole sections, connect them to the lower sections before installing the top shelves.
8. **Final Adjustment:** Once all shelves are in place, adjust the leveling feet at the bottom of the poles to ensure the unit is stable and does not wobble on uneven surfaces.

This image provides a visual guide for assembling the shelving unit, detailing the process of attaching the two-piece clamps to the poles, aligning them with the grooves, and securing the shelves.

This illustration shows how the shelves can be adjusted to different heights along the poles, allowing for customization based on the size of items being stored.

3. OPERATING INSTRUCTIONS

Once assembled, the Whitmor 3-Shelf Storage Rack is ready for use. Its design allows for flexible storage solutions.

Loading the Shelves:

- Distribute weight evenly across each shelf to maintain stability and prevent bowing.
- Do not exceed the maximum weight capacity of 150 lbs per shelf or 750 lbs total for the unit.
- Place heavier items on lower shelves to enhance overall stability.

Adjusting Shelf Height:

To adjust the height of a shelf, first remove any items from that shelf. Then, lift the shelf off the clips. Remove the plastic clips from the poles and re-position them at the desired groove level. Finally, slide the shelf back onto the newly positioned clips, ensuring it is level and secure.

4. MAINTENANCE

Proper maintenance will ensure the longevity and continued performance of your Whitmor 3-Shelf Storage Rack.

Cleaning:

To clean the shelving unit, simply wipe it with a dry cloth. Avoid using abrasive cleaners or harsh chemicals that could damage the finish.

Corrosion Prevention:

The surface of this metal storage shelving is specially coated to prevent rust or corrosion. While it can be placed in environments like bathrooms, regular wiping with a dry cloth will help maintain its protective coating and appearance.

5. TROUBLESHOOTING

This section addresses common issues you might encounter with your shelving unit.

Wobbling or Instability:

- Ensure the adjustable feet at the bottom of each pole are properly extended and adjusted to compensate for uneven flooring.
- Verify that all shelves are securely seated on their plastic clips and that the clips are firmly snapped into the grooves on the poles.
- Check that the pole sections are tightly screwed together.

Difficulty During Assembly (Clips Slipping):

If the plastic clips slide down the poles when trying to install a shelf, try the following:

- Ensure the clips are fully snapped together and aligned with the grooves.
- Temporarily secure the clips with a small piece of tape around the pole and clips before sliding the shelf down. Remove the tape once the shelf is securely in place.
- Ensure the shelf is slid down evenly over all four poles simultaneously.
