When the toaster oven is not in use, ensure it is clean and completely dry. Store it in a cool, dry place, away from direct sunlight and excessive moisture.

6. TROUBLESHOOTING

If you encounter issues with your MegaChef toaster oven, please refer to the following common problems and their potential solutions:

Problem	Possible Cause	Solution
Oven does not turn on or heat up.	Not properly plugged in. Timer not set. Power supply issue.	Ensure the power cord is securely plugged into a functional electrical outlet. Turn the Timer Knob clockwise to the desired cooking time. The oven will not operate if the timer is at "OFF". Check your household's circuit breaker or fuse box. Test the outlet with another appliance.
Food is not cooking evenly or as expected.	Incorrect temperature setting. Improper food placement. Oven not preheated.	Verify that the Temperature Knob is set to the correct temperature for your recipe. Ensure food is centered on the rack/tray and not touching the heating elements or oven walls. Allow the oven to preheat for a few minutes after setting the temperature and timer before placing food inside.
Smoke or unusual odor during operation.	Food residue or spills. Initial burn-off from manufacturing.	Unplug the oven and allow it to cool. Thoroughly clean the interior and crumb tray to remove any food particles or grease. A small amount of smoke or odor is normal during the very first uses (initial burn-off). Ensure good ventilation. If persistent or excessive, discontinue use and contact customer support.

If the problem persists after attempting these solutions, please contact customer support for further assistance.
