TROUBLESHOOTING

Problem	Possible Cause	Solution
No image displayed	Power not connected, incorrect input source, device not powered on.	Check power connection, select correct input source (HDMI, USB), ensure connected device is on.
Blurry image	Incorrect focus, projector too close/far from screen.	Adjust the manual focus slider. Ensure optimal projection distance (e.g., 1.5m for 86" image).
Distorted image (trapezoid)	Projector not perpendicular to the screen.	The projector has automatic vertical keystone correction. If needed, use manual 4-point correction in settings.
No sound	Volume too low, external speaker not connected/paired, incorrect audio output selected.	Increase volume. Check Bluetooth connection for external speakers or ensure 3.5mm cable is properly connected. Verify audio settings.
Wi-Fi/Bluetooth connectivity issues	Out of range, interference, incorrect password.	Ensure projector is within range of router/Bluetooth device. Check Wi-Fi password. Restart projector and router.
