KingChii 70L

KingChii Upgrade 70L Temperature & Humidity Control Cabinet Instruction Manual

Model: 70L

INTRODUCTION

Thank you for choosing the KingChii Upgrade 70L Temperature & Humidity Control Cabinet. This appliance is designed to provide an optimal and stable environment for storing your cigars, ensuring their quality and longevity. Please read this manual thoroughly before operation to ensure proper use and maintenance.

KEY FEATURES

- **Precise Temperature & Humidity Control:** Utilizes semiconductor electronic refrigeration technology to maintain a constant temperature range of 64-72°F and a humidity range of 60%-75%.
- **360° Air Circulation & Frost-Free:** An advanced circulation system ensures even airflow throughout the unit, maintaining consistent conditions and preventing frost buildup for optimal storage.
- **Spanish Cedar Wood Interior:** Features high-quality Spanish cedar wood shelves and drawers. The natural aroma of cedar wood moisturizes, allows for proper breathing, removes peculiar odors, and protects your collection from drying out or molding.
- **Tempered Glass Door with Touch Control:** Equipped with a double-layer mirror glass door that offers heat insulation, heat resistance, and wear resistance. The integrated electronic touch screen provides fast response and easy operation for temperature and humidity adjustments.

SETUP

Unboxing and Placement

Upon receiving your KingChii humidor, carefully remove it from its packaging. Place the unit in an open room with adequate air circulation. Avoid building it into any type of enclosure like a cabinet, as it relies on ambient air for cooling. Ensure there is sufficient space around the unit for proper ventilation.

Initial Power-On

Plug the power cord into a suitable electrical outlet. The digital display on the touch panel will illuminate, showing the current temperature and humidity settings. The unit will begin to stabilize to its default settings or the last set parameters.

Seasoning the Humidor

It is crucial to season your humidor before adding any cigars to ensure proper humidity levels and prevent damage to your collection. Follow these steps:

1. Remove all items from the humidor, including shelves and the moisture container.
2. Wipe the interior of the unit, including the cedar shelves and drawers, with a sponge or cloth dampened with distilled water. Ensure no standing water remains.
3. Fill the included moisture container (or a sponge) with distilled water. Place it inside the humidor, ensuring the water does not directly touch the wood.
4. Close the humidor door and allow it to sit for at least 24-48 hours. Monitor the hygrometer reading. The process may take up to three days.
5. Once the hygrometer reads between 65%-75% RH, your humidor is seasoned and ready for cigars.

OPERATING INSTRUCTIONS

Temperature and Humidity Adjustment

Use the electronic touch screen on the door to adjust the desired temperature and humidity levels. The temperature range is 64-72°F, and the humidity range is 60%-75% RH. Press the up/down arrows to set your preferred values. The display will flash while adjusting and then lock in the new setting.

Interior Lighting

The humidifier features soft interior LED lighting. Use the light button on the touch panel to turn the lights on or off. This allows for easy viewing of your cigar collection.

Soft Interior Lighting

Turn on the energy-saving LED lights to gently light up your collection

MAINTENANCE

Cleaning

Regularly wipe the interior of the humidifier with a clean, damp cloth (using distilled water) to prevent dust buildup and maintain hygiene. The double-layer mirror glass door is wear-resistant and easy to clean with a soft cloth.

Humidification Refill

Monitor the water level in the moisture container. Refill with distilled water as needed to maintain the desired humidity range. Ensure the water does not directly contact the cedar wood.

Smart Temperature & Humidity Control

Perfect to store cigars separately in best preservation

TROUBLESHOOTING

- **Humidity Too High:** If the hygrometer reads above 75% RH, remove the moisture container and expose it to air to allow some water to evaporate.
- **Humidity Too Low:** If the hygrometer reads below 60% RH, refill the moisture container with distilled

water.

- **Temperature Not Stable:** Ensure the unit is placed in an open area with good air circulation and not enclosed in a cabinet. Verify that the vents are not blocked.
- **Unit Not Powering On:** Check the power cord connection and ensure the outlet is functioning correctly.

SPECIFICATIONS

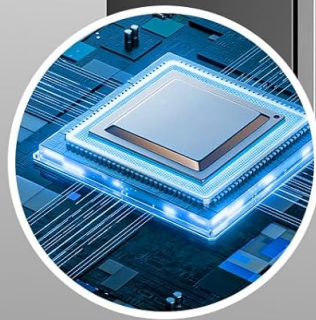

Specification	Detail
Model Number	2b60e9ad-3fd5-4513-82aa-7b36e5842a71
Capacity	70 Liters
Temperature Range	64-72°F
Humidity Range	60%-75% RH
Cooling Method	Thermoelectric
Defrost System Type	Automatic
Number of Doors	1
Installation Type	Freestanding
