Model: SIM2 MAX

### INTRODUCTION

---

The TaylorMade SIM2 MAX Driver is engineered for optimal performance, combining advanced materials and innovative design to enhance ball speed, forgiveness, and adjustability. This manual provides essential information for the proper setup, operation, and maintenance of your driver, ensuring you maximize its potential on the golf course.

## KEY FEATURES

- **New Forged Ring Construction:** Forged from lightweight and high-strength aluminum, this construction is milled to an exacting shape, uniting a massive rear weight, a full carbon sole, crown, and a new milled back cup face. This design contributes to stability and power.

- **SIM Inertia Generator:** The asymmetric Inertia Generator is specifically designed to provide faster club head speed through advanced geometry and aerodynamic analytics, allowing for more efficient swings.

- **Speed Injected Twist Face:** This technology improves ball speed by calibrating each head to the threshold of the legal speed limit. The corrective face curvature also protects against heel and toe mis-hits, promoting straighter shots.

- **Thru-Slot Speed Pocket:** This is TaylorMade's most flexible Speed Pocket design, engineered to maximize ball speeds and produce additional forgiveness on low face strikes, helping maintain distance even on off-center hits.
- **Split Mass Weighting:** Designed to enhance forgiveness, this feature also allows for pinpoint target swing weights during custom assembly, providing tailored performance for individual golfers.

## SETUP

---

The SIM2 MAX Driver features an adjustable hosel, allowing you to fine-tune the loft and lie angle to optimize your ball flight and shot shape. A torque wrench (not included with the driver) is required for adjustments.

### Adjusting Loft and Lie:

1. Insert the torque wrench into the screw at the base of the hosel.
2. Turn the wrench counter-clockwise to loosen the screw until the clubhead can be rotated freely. Do not completely remove the screw.
3. Rotate the clubhead to align the desired loft setting (e.g., STD LOFT, HIGHER, LOWER) with the indicator on the hosel. The current model is 9 Degrees.
4. Once the desired setting is selected, turn the torque wrench clockwise to tighten the screw until an audible click is heard. This indicates the screw is properly torqued.
5. Ensure the clubhead is securely fastened before use.

*Note:* Refer to the markings on the hosel for specific loft and lie adjustments. Experiment with different settings on a driving range to find what works best for your swing.

## OPERATING THE DRIVER

---

The TaylorMade SIM2 MAX Driver is designed for maximum distance and forgiveness off the tee. Proper technique is crucial for optimal performance.

### Basic Usage Guidelines:

- **Stance and Ball Position:** For a driver, position the ball off the heel of your lead foot. Maintain a wide stance for stability.
- **Swing Path:** Aim for a slight upward angle of attack to maximize launch and minimize spin.
- **Impact:** Focus on striking the ball in the center of the clubface for optimal ball speed and accuracy, leveraging the Speed Injected Twist Face technology.
- **Follow Through:** Complete your swing with a full, balanced follow-through to ensure maximum power transfer.

Consistent practice and professional instruction are recommended to fully utilize the driver's capabilities.

## MAINTENANCE

---

Proper care will extend the life and maintain the performance of your TaylorMade SIM2 MAX Driver.

- **Cleaning:** After each round, wipe the clubhead and shaft with a damp cloth to remove dirt and debris. Use a soft brush to clean the grooves on the clubface. Dry thoroughly.
- **Storage:** Store your driver in a cool, dry place, ideally with a headcover to protect the clubhead from

scratches and dings. Avoid extreme temperatures.

- **Grip Care:** Regularly clean your grip with mild soap and water to remove oils and dirt, which can reduce tackiness. Allow it to air dry completely.
- **Inspection:** Periodically inspect the clubhead, shaft, and grip for any signs of damage, such as cracks, dents, or loose components.

## TROUBLESHOOTING

If you encounter issues with your driver, consider the following common troubleshooting tips:

| Problem                      | Possible Cause   | Solution  |
|------------------------------|--|---|
| Loss of Distance             | Improper ball striking, incorrect loft setting, worn grip.                 | Practice hitting the sweet spot. Adjust loft setting. Clean or replace grip.  |
| Excessive Slice/Hook         | Incorrect swing path, improper clubface angle at impact, loft/lie setting. | Review swing mechanics. Adjust loft/lie setting. Consider professional coaching.  |
| Rattling Sound from Clubhead | Loose internal component or debris.  | This is usually not a performance issue. If concerned, contact TaylorMade support. Do not attempt to open the clubhead. |
| Grip feels slippery          | Dirt, oil, or sweat buildup.   | Clean grip thoroughly with mild soap and water. If still slippery, consider replacing the grip.                         |
