Troubleshooting

Problem	Possible Cause	Solution
Appliance does not turn ON/OFF.	Outlet not powered, appliance switch OFF, remote battery low/dead, out of range, interference.	Ensure wall outlet is active. Turn appliance switch to ON. Replace remote battery. Move closer to the outlet. Reduce other RF devices nearby.
Reduced remote range.	Low remote battery, excessive interference, thick walls/obstacles.	Replace remote battery. Minimize other RF devices. Try to use in a clearer line of sight if possible.
Outlet feels warm.	Overload, incompatible power source (e.g., modified sine wave inverter).	Ensure connected appliance wattage does not exceed 1875W. Avoid using with modified sine wave inverters; use with pure sine wave inverters or standard AC power. Discontinue use if excessively hot.
