1. **Unpack Components:** Carefully remove all parts from the packaging and lay them out on a clean, soft surface to prevent scratches. Identify each component using the provided parts list in your separate instruction booklet.
2. **Assemble the Base Frame:** Follow the step-by-step diagrams in your instruction booklet to connect the main frame components. Ensure all bolts are finger-tightened initially.
3. **Attach Headboard and Footboard:** Secure the velvet upholstered headboard and the footboard to the assembled base frame.
4. **Install Canopy Posts:** Attach the four canopy posts to the corners of the bed frame.
5. **Connect Top Canopy Rails:** Secure the top rails to complete the canopy structure.

OPERATING INSTRUCTIONS

Mattress and Box Spring Compatibility

This canopy bed requires a box spring for proper use and optimal support. For the best comfort and aesthetic balance, it is recommended to pair a mattress with a box spring to achieve a total height of approximately 17-20 inches. This combination ensures a plush, supportive sleeping surface while maintaining the bed's elegant proportions.

Figure 4: Visual confirmation that a box spring is required for this bed frame. The recommended total height for the mattress and box spring combined is 17 inches.

Canopy Usage

The four-poster design allows for the addition of curtains or drapes (not included) to enhance privacy, regulate room temperature, or reduce noise. Choose a fabric that suits your desired aesthetic and functional needs.

MAINTENANCE

Product Care Instructions

- **Metal Frame:** Wipe the metal frame with a soft, damp cloth. Avoid using harsh chemicals or abrasive cleaners, as these can damage the powder-coated finish.
- **Velvet Headboard:** For the velvet upholstered headboard, gently spot clean with a mild fabric cleaner as needed. Test the cleaner on an inconspicuous area first. Vacuum regularly with an upholstery attachment to remove dust and debris.

- **General:** Periodically check all bolts and connections to ensure they remain tight. Re-tighten if any looseness is detected.

TROUBLESHOOTING

- **Squeaking Noises:** If the bed frame produces squeaking noises, ensure all bolts and screws are securely tightened. Loose connections are a common cause of squeaking. Applying a small amount of lubricant (e.g., WD-40) to the joints can also help.
- **Mattress Sliding:** If your mattress tends to slide on the slats, consider placing a non-slip mattress pad or rubber grippers between the mattress and the slats to increase friction.
- **Instability:** If the bed feels unstable, re-check all connections and ensure they are fully tightened. Verify that all parts are correctly assembled according to the instructions.
