2. Installation Guide

Proper installation is crucial for optimal performance and longevity of your screen protector. Please follow these steps carefully:

1. **Clean the Screen:** Thoroughly clean your device's screen using the provided microfiber cloth to remove all dust, fingerprints, and smudges. Ensure the screen is completely dry before proceeding.

2. **Align the Film:** Carefully peel off a small portion of the protective layer from the screen protector. Align the film with the edges of your device's screen, ensuring precise placement for all cutouts (e.g., camera, sensors).
3. **Apply and Smooth:** Slowly peel off the remaining protective layer while simultaneously applying the film to the screen. Use the included application card or a soft, flat object to gently push out any air bubbles towards the edges. The special silicone adhesive layer is designed to force out air for bubble-free adhesion.
4. **Final Touches:** Once the film is fully applied, gently wipe the surface with the microfiber cloth to remove any remaining dust or smudges.

4. Care and Maintenance

To ensure the longevity and clarity of your atFoliX FX-Clear Screen Protection Film, follow these simple maintenance guidelines:

- **Cleaning:** Use a soft, lint-free cloth, such as the microfiber cloth provided, to gently wipe the screen protector. For stubborn smudges, slightly dampen the cloth with water or a screen-safe cleaning solution. Avoid harsh chemicals or abrasive materials.
- **Avoid Sharp Objects:** While the film is highly scratch-resistant, extreme pressure from very sharp objects can still cause damage. Avoid placing your device face down on rough surfaces or in pockets with keys and coins.
- **Temperature Exposure:** Avoid exposing your device to extreme temperatures, as this can affect the adhesive properties of the film over time.

5. Troubleshooting

Here are solutions to common issues you might encounter during or after installation:

- **Bubbles After Installation:**
 - **Small Bubbles:** Many small bubbles will disappear naturally within 24-48 hours as the adhesive fully cures.
 - **Large Bubbles:** Gently lift the nearest edge of the film and reapply, using the application card to push the air out as you lay it back down.
- **Dust Particles Under the Film:**
 - If dust is trapped, carefully lift the corner of the film closest to the dust particle. Use a piece of adhesive tape to gently dab the dust off both the screen and the film's adhesive side. Reapply the film slowly.
- **Misalignment:**
 - If the film is significantly misaligned, carefully peel it off completely, clean the screen again, and attempt reinstallation. The film is designed for residue-free removal.
