SuperVac HEPA Filter Instruction Manual

For Fakir Stone HSA 4048 and Inovator 4048 Cordless Vacuum Cleaners

1. PRODUCT OVERVIEW

This SuperVac HEPA filter is specifically designed for use with Fakir Stone HSA 4048 and Inovator 4048 cordless vacuum cleaners. It is engineered to significantly improve indoor air quality by effectively capturing harmful airborne particles.

The filter boasts a high efficiency rate, trapping 99.97% of particles as small as 0.3 microns. This includes common allergens and pollutants such as dust, pollen, pet dander, bacteria, and cigarette smoke. By preventing these particles from recirculating into your environment, the filter ensures cleaner air for a healthier living space.

2. SETUP AND INSTALLATION

Follow these steps to correctly install your new SuperVac HEPA filter:

- 1. Prepare the Vacuum Cleaner:** Ensure your Fakir Stone HSA 4048 or Inovator 4048 vacuum cleaner is turned off and disconnected from its charging station.
- 2. Locate Filter Compartment:** Identify the filter compartment on your vacuum cleaner. This is typically found near the dustbin or motor housing. Consult your vacuum cleaner's user manual if you are unsure of its location.
- 3. Remove the Old Filter:** Open the filter compartment. Carefully remove the used HEPA filter. Dispose of the old filter according to local waste disposal guidelines.
- 4. Insert the New Filter:** Unpack the new SuperVac HEPA filter. Align the new filter with the compartment and gently push it into place. Ensure it is securely seated and forms a tight seal to prevent air bypass.
- 5. Close the Compartment:** Close the filter compartment cover firmly. The vacuum cleaner is now ready for use with the new filter.

This image displays the SuperVac HEPA filter, highlighting its pleated filtration material and sturdy black frame. This design ensures maximum surface area for particle capture.

A side view of the SuperVac HEPA filter, illustrating the sealing gasket around the edge which ensures a tight fit within the vacuum cleaner, preventing air bypass. The internal pleated structure is also visible.

3. OPERATING INSTRUCTIONS

Once the SuperVac HEPA filter is correctly installed, it operates passively as an integral part of your vacuum cleaner's filtration system. As the vacuum cleaner draws in air, the filter's advanced media traps microscopic particles, preventing them from being released back into the environment. This process ensures that the air expelled by the vacuum cleaner is significantly cleaner, contributing to a healthier indoor atmosphere.

4. MAINTENANCE

Proper maintenance ensures the longevity and effectiveness of your HEPA filter.

- **Filter Replacement:** For optimal performance and to maintain high air quality, it is recommended to replace the HEPA filter regularly. The exact replacement interval can vary based on usage frequency and the level of dust and debris in your environment. A general guideline is to replace the filter every 3 to 6 months. Refer to your Fakir Stone HSA 4048 or Inovator 4048 vacuum cleaner's user manual for specific recommendations.
- **Cleaning:** This SuperVac HEPA filter is designed for high-efficiency particulate air filtration and is generally not washable. Attempting to wash the filter may damage its delicate pleated structure and significantly reduce its filtration effectiveness. If the filter appears visibly dirty or clogged, it should be replaced rather than cleaned.

5. TROUBLESHOOTING

If you encounter issues related to the filter, consider the following:

- **Reduced Suction Power:** If your vacuum cleaner experiences a noticeable reduction in suction power, the HEPA filter may be clogged with accumulated dust and debris. Inspect the filter; if it appears heavily soiled, replace it.
- **Unusual Odors:** Persistent unpleasant odors emanating from the vacuum cleaner during operation can indicate a heavily soiled or old filter. Replacing the filter can help eliminate these odors.
- **Dust Escaping:** If you observe dust visibly escaping from the vacuum cleaner's exhaust, first ensure that the HEPA filter is correctly installed and securely seated in its compartment. If the filter is damaged or improperly fitted, replace it immediately.

6. SPECIFICATIONS

- **Brand:** SuperVac
- **Model Number:** KG0058205
- **Compatibility:** Fakir Stone HSA 4048, Inovator 4048 Cordless Vacuum Cleaners
- **Filtration Efficiency:** 99.97% for particles 0.3 microns and larger
- **Filter Type:** High-Efficiency Particulate Air (HEPA) filter
- **Country of Origin:** Turkey

7. SAFETY INFORMATION

No specific safety warnings were provided for this product. However, always observe general safety precautions when handling vacuum cleaner accessories:

- Always ensure the vacuum cleaner is turned off and unplugged from its power source or charging station before attempting to install, remove, or inspect the filter.
- Keep replacement filters out of reach of children.
- Do not attempt to modify the filter. Use only as intended for compatible vacuum cleaner models.

8. WARRANTY AND SUPPORT

No specific warranty information is provided for this SuperVac HEPA filter within the product details. For any warranty inquiries, product support, or assistance, please contact your retailer or the SuperVac customer service directly. Please retain your proof of purchase for any potential claims.
