1. Remove any items from the top of the bed that might obstruct the lifting process.
2. Locate the fabric pull handle at the foot of the bed.
3. Firmly grasp the handle and lift the mattress platform upwards. The gas lift mechanism will assist in raising and holding the platform in an open position.
4. To close, gently pull the platform downwards using the handle until it rests securely on the frame.

- **Charging Station:** Keep the charging ports free of dust and debris. Do not expose the charging station to liquids.

TROUBLESHOOTING

Problem	Possible Cause	Solution
Bed frame is unstable or wobbly.	Loose hardware.	Check and tighten all bolts and screws. Ensure the bed is on a level surface.
Squeaking noises.	Loose connections or friction between parts.	Retighten all hardware. Apply a small amount of lubricant (e.g., silicone spray) to contact points if necessary, avoiding wood surfaces.
Gas lift mechanism is difficult to lift or won't stay up.	Mattress is too heavy or too light; mechanism malfunction.	Ensure your mattress weight is within the recommended range for gas lift beds. If the issue persists, contact customer support.
Charging station not working.	Power cord unplugged; faulty outlet; device issue.	Verify the bed's power cord is securely plugged into a working wall outlet. Test the outlet with another device. Try a different device with the charging station.
