5. SETUP AND INSTALLATION

The installation process is designed to be straightforward. Refer to the included step-by-step manual for precise measurements and detailed instructions. The general steps are outlined below:

Image 5.1: Visual guide to the installation steps.

1. **Install Track:** Assemble the 5 rail sections to form the 60-inch track. Secure the track to the cabinet or wall using the provided rail spacers and mounting hardware. Ensure the track is level and securely fastened.
2. **Install Hangers:** Attach the rollers (hangers) to the top edge of your bi-folding doors according to the door manufacturer's recommendations and the provided hardware kit instructions.
3. **Install Hinges:** Connect the bi-folding door panels using appropriate hinges (not included in this kit, typically part of the door assembly).
4. **Mount Doors:** Carefully lift and hang the doors onto the installed track, ensuring the rollers engage properly.
5. **Install Door Guide:** Secure the floor guides to the cabinet base or floor directly beneath the doors. Adjust the guides to ensure smooth door movement and prevent swaying.

6. **Adjust and Test:** Once all components are installed, test the doors for smooth operation. Make any necessary adjustments to the door stoppers and floor guides to achieve desired movement and closure.

For optimal performance, ensure all measurements are precise and components are aligned correctly.

6. OPERATING INSTRUCTIONS

To operate the bi-folding sliding barn doors, simply grasp the door handle (if installed) and slide the door along the track. The rollers are designed for smooth and quiet movement.

The bi-folding design allows the doors to fold inward or outward, depending on your setup, providing access to the cabinet interior while minimizing the space required for door swing.

7. MAINTENANCE

Regular maintenance helps ensure the longevity and smooth operation of your hardware kit:

- **Cleaning:** Wipe the track and rollers periodically with a soft, damp cloth to remove dust and debris. Avoid abrasive cleaners.
- **Inspection:** Annually inspect all mounting hardware, screws, and rollers for any signs of loosening or wear. Tighten any loose fasteners.
- **Lubrication:** While the nylon rollers are designed for quiet operation, a light application of silicone-based lubricant to the roller bearings and track can further enhance smoothness if needed. Avoid oil-based lubricants that can attract dust.

8. TROUBLESHOOTING

If you encounter issues with your hardware kit, refer to the following troubleshooting tips:

- **Doors not sliding smoothly:**
 - Check the track for any obstructions or debris. Clean the track thoroughly.
 - Verify that the track is level and securely mounted. Uneven installation can cause friction.
 - Inspect the rollers for damage or excessive wear.
 - Ensure the floor guides are properly aligned and not causing resistance.
- **Rollers jumping off track:**
 - Confirm that the hangers are correctly installed on the doors and fully engaged with the track.
 - Check the door stoppers at the ends of the track; they should prevent the rollers from exiting.
 - Ensure the doors are within the specified thickness and weight capacity.
- **Stiff operation:**
 - Apply a silicone-based lubricant to the rollers and track.
 - Verify that the doors are not binding against the cabinet frame or other doors.
 - Re-check the alignment of the track and floor guides.
