SETUP AND ASSEMBLY

Assembly of the Feonase bed frame is designed to be straightforward and can typically be completed by one person in under 30 minutes. Follow these steps carefully:

1. **Unpack and Organize:** Carefully remove all components from the packaging. Lay out all parts and organize them by their corresponding numbers or labels as indicated in the included installation manual.
2. **Initial Screw Fastening:** When attaching components with screws, it is recommended to initially screw them in most of the way using your fingers. This helps prevent cross-threading and ensures proper alignment before fully tightening with the provided tools.
3. **Orient "U" Rail Holders Correctly:** Pay close attention to the orientation of the "U" shaped rail holders. Ensure they are pointing upwards to properly receive the bed slats. Incorrect orientation will prevent proper assembly.
4. **Assemble Headboard and Footboard:** Attach the side rails to the headboard and footboard sections. Ensure all connections are secure but do not fully tighten all screws until the frame is mostly assembled to allow for minor adjustments.
5. **Install Support Slats:** Place the hardened steel slats across the frame. The buckle one-click assembly feature simplifies this step. Ensure each slat is securely seated to provide stable mattress support.
6. **Final Tightening:** Once all components are in place and aligned, systematically tighten all screws using the provided tools. Ensure all connections are firm to prevent any wobbling or noise.

Important Safety Note:

Be cautious of pinch points during assembly.

Ensure all parts are securely fastened to prevent instability.

The bed legs feature fluorescent strips that glow in the dark to help prevent toe stubbing at night.

OPERATING FEATURES

The Feonase bed frame is designed with several features to enhance your sleeping experience:

- **Sturdy Construction:** Built with 8 hardened steel slats and 4 thickened metal crossbars, the frame provides robust support and stability, minimizing movement and ensuring a secure foundation for your mattress.
- **Noise-Free Design:** The frame incorporates EVA silent foam and precise engineering to reduce friction noise, ensuring a quiet and undisturbed sleep environment.
- **Under-Bed Storage:** With 12 inches of clearance beneath the frame, ample space is available for convenient storage of various items, helping to optimize your room's organization.
- **Embedded Mattress Design:** The integrated headboard and footboard design securely holds your mattress in place, preventing it from sliding and ensuring a restful sleep. No box spring is required for this frame.
- **Fluorescent Leg Strips:** The bed legs are equipped with fluorescent strips that glow in the dark, providing visibility and reducing the risk of accidental toe stubbing at night.

MAINTENANCE

To ensure the longevity and optimal performance of your Feonase bed frame, follow these simple maintenance guidelines:

- **Regular Cleaning:** Wipe down the metal frame with a soft, damp cloth to remove dust and dirt. Avoid using harsh chemicals or abrasive cleaners, which can damage the polished finish.
- **Check Connections:** Periodically inspect all screws and connections to ensure they remain tight. Over time, normal use can cause fasteners to loosen. Re-tighten any loose screws to maintain stability and prevent squeaking.
- **Slats Inspection:** Ensure all steel slats are properly seated and not bent or damaged. Replace any damaged slats immediately to maintain proper mattress support.

TROUBLESHOOTING

If you encounter any issues with your Feonase bed frame, refer to the following common problems and their solutions:

Problem	Possible Cause	Solution
Bed frame is squeaking or creaking.	Loose screws or connections; friction between metal parts.	Tighten all screws securely. Ensure all slats are properly seated. Check for any metal-on-metal contact points and apply a small amount of lubricant or place a thin piece of fabric/foam (like the included EVA silent foam) between them.
Bed frame feels unstable or wobbly.	Loose connections; incorrect assembly of parts.	Re-check all connections and tighten all screws. Verify that all parts, especially the "U" rail holders, are oriented and assembled correctly according to the manual.
Mattress slides on the frame.	Mattress not properly seated; frame not level.	Ensure the mattress is fully within the embedded headboard and footboard design. Check that the bed frame is on a level surface.
