

Vente-unique TORIPA

Vente-unique TORIPA Invisible Rail Sliding Door User Manual

Model: TORIPA | Brand: Vente-unique

INTRODUCTION

This manual provides comprehensive instructions for the installation, operation, and maintenance of your Vente-unique TORIPA Invisible Rail Sliding Door. This door features an aluminum frame and translucent tempered glass, designed for interior use. Please read these instructions carefully before beginning installation to ensure safe and correct assembly and operation.

SAFETY INFORMATION

- Always wear appropriate safety gear, including gloves and eye protection, during installation.
- Ensure the installation area is clear of obstructions and well-lit.
- This product is heavy (approximately 36 kg). Two or more people are recommended for lifting and positioning the door panel.
- Verify that the wall structure is capable of supporting the weight of the door and its rail system.
- Keep children and pets away from the installation area.
- Do not modify the product in any way not described in this manual.
- Use only the provided hardware or suitable replacements as specified.

PACKAGE CONTENTS

Before starting assembly, ensure all components are present and undamaged. Refer to the list below and the accompanying image.

- 1x Sliding Door Panel (Aluminum frame with translucent tempered glass)
- 1x Invisible Rail System
- 1x Handle
- 1x Set of Screws and Fasteners
- Installation Manual (this document)

SETUP AND INSTALLATION

This section details the steps required to install your sliding door. Professional installation is recommended. Ensure you have all necessary tools before proceeding.

1. Prepare the Opening

Measure the door opening carefully. The door is designed for an opening with a maximum height of 2050mm. The door panel itself is 930mm wide and 2100mm high. Ensure there is sufficient wall space adjacent to the opening for the door to slide open completely.

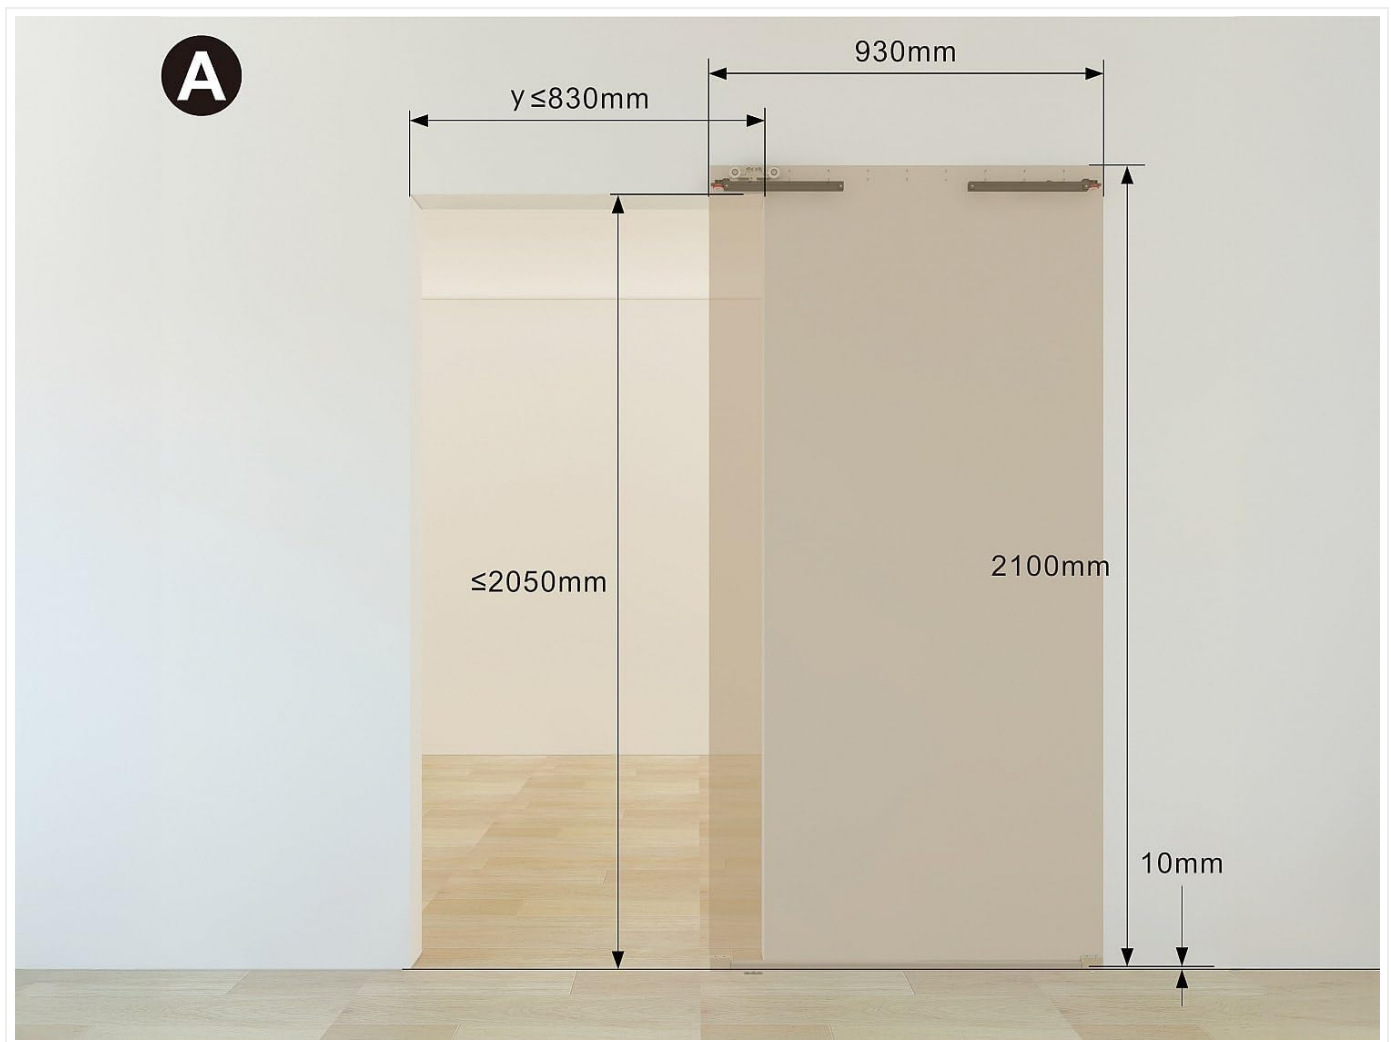

Image: Diagram A illustrates the required dimensions for the door opening and adjacent wall space for installation. Note the door width of 930mm and height of 2100mm, with a minimum clearance of 10mm from the floor.

Image: Diagram B provides an alternative view of the required dimensions, reinforcing the need for adequate space for the door to slide. The door maintains a 10mm gap from the floor.

2. Install the Invisible Rail System

Mount the invisible rail system securely to the wall above the door opening. Use appropriate fasteners for your wall type. Ensure the rail is perfectly level to allow for smooth door operation. The rail should extend beyond the door opening to accommodate the full width of the door when open.

3. Attach Door Hardware

Attach the rollers and other necessary hardware to the top edge of the door panel as per the detailed instructions provided in the separate hardware manual (if applicable) or diagrams. Install the handle on the door panel at a comfortable height.

4. Hang the Door Panel

With assistance, carefully lift the door panel and engage the rollers with the invisible rail system. Ensure the door hangs freely and can slide smoothly along the entire length of the rail. Adjust any stoppers or guides to prevent the door from coming off the track or hitting the wall too hard.

OPERATING INSTRUCTIONS

The Vente-unique TORIPA sliding door is designed for simple operation.

- **Opening the Door:** Gently grasp the handle and slide the door panel along the rail until it is fully open.
- **Closing the Door:** Gently grasp the handle and slide the door panel along the rail until it is fully closed.
- **Reversible Opening:** The door can be installed to slide to either the left or the right, depending on your preference and room layout. This is determined during the initial installation process.

Avoid forcing the door if it encounters resistance. Check for obstructions or alignment issues if movement is not smooth.

MAINTENANCE

Regular maintenance will ensure the longevity and smooth operation of your sliding door.

- **Cleaning the Glass:** Use a soft, lint-free cloth and a non-abrasive glass cleaner. Avoid harsh chemicals that could damage the translucent finish.
- **Cleaning the Frame:** Wipe the aluminum frame with a soft, damp cloth. For stubborn marks, a mild soap solution can be used, followed by drying. The powder-coated finish is durable but can be scratched by abrasive materials.
- **Rail and Rollers:** Periodically inspect the invisible rail and rollers for any dust, debris, or signs of wear. Clean the rail with a dry cloth. If the rollers become stiff, a small amount of silicone-based lubricant can be applied, but avoid

oil-based lubricants which can attract dust.

- **Hardware:** Check all screws and fasteners periodically to ensure they are tight. Retighten if necessary.

TROUBLESHOOTING

Problem	Possible Cause	Solution
Door does not slide smoothly.	Debris in rail, misaligned rollers, loose hardware.	Clean the rail, check roller alignment, tighten all fasteners.
Door is difficult to open/close.	Obstruction in path, rail not level, damaged rollers.	Remove obstructions, verify rail levelness, inspect and replace damaged rollers if necessary.
Door makes noise when sliding.	Dry rollers, debris in rail, loose components.	Lubricate rollers with silicone spray, clean rail, tighten hardware.
