Troubleshooting

If your remote control is not functioning as expected, consider the following common issues and solutions:

- **Remote Not Responding**: Check if the batteries are inserted correctly with the proper polarity. Replace old or depleted batteries with new AAA batteries.
- **No Signal to AC Unit** Ensure there are no obstructions between the remote control and the air conditioner's receiver. Point the remote directly at the air conditioner.
- **Intermittent Operation**: This could indicate low battery power. Replace the batteries.
- **Buttons Not Working**: If specific buttons are unresponsive, try pressing the RESET button (usually a small, recessed hole) with a pointed object like a paperclip. This will reset the remote to its default state.
