Hidrate Spark HH-TR32C-02E

Hidrate Spark TAP Smart Water Bottle User Manual

Model: HH-TR32C-02E

INTRODUCTION

Welcome to the user manual for your Hidrate Spark TAP Smart Water Bottle. This innovative bottle is designed to help you stay hydrated by tracking your water intake and providing timely reminders. Featuring a durable Tritan plastic construction, a convenient chug lid, and an LED glow reminder system, the Hidrate Spark TAP integrates seamlessly with your smartphone to monitor your daily hydration goals.

Please read this manual thoroughly to ensure proper setup, operation, and maintenance of your smart water bottle.

SETUP

1. Unboxing and Initial Inspection

Carefully remove all components from the packaging. Verify that all parts are present: the Hidrate Spark TAP bottle, the sensor puck, and the chug lid. Inspect for any visible damage.

2. Charging the Sensor Puck

Before first use, fully charge the sensor puck. Connect the included charging cable to the sensor puck and a USB power source. The LED on the puck will indicate charging status and turn solid when fully charged.

3. Downloading the Hidrate Spark App

Download the official Hidrate Spark app from your device's app store (App Store for iOS or Google Play Store for Android). Create an account or log in if you already have one.

4. Pairing Your Bottle

1. Ensure Bluetooth is enabled on your smartphone.
2. Open the Hidrate Spark app and follow the on-screen instructions to add a new bottle.
3. The app will guide you through the pairing process, which typically involves tapping your phone to the sensor puck or pressing a button on the puck.

4. Once paired, set your daily hydration goal within the app.

OPERATING INSTRUCTIONS

1. Filling the Bottle

Unscrew the chug lid and fill the bottle with water. Do not overfill. Ensure the sensor puck is securely attached to the bottom of the bottle before reattaching the lid.

2. Tracking Water Intake

After drinking, simply tap your smartphone to the sensor puck at the base of the bottle. The app will automatically log the amount of water consumed. Ensure your phone's NFC (Near Field Communication) is enabled for this feature to work.

3. LED Glow Reminders

The base of your Hidrate Spark TAP bottle will glow to remind you to drink water throughout the day. These reminders are customizable within the Hidrate Spark app. The glow pattern and color may vary based on your settings and hydration progress.

4. Using the Chug Lid

The chug lid is designed for easy and quick hydration. Flip open the spout to drink directly from the bottle. Close the spout firmly to prevent leaks.

MAINTENANCE

1. Cleaning the Bottle

- **Bottle Body:** The Tritan plastic bottle body is top-rack dishwasher safe. For best results, hand wash with warm, soapy water.
- **Lid:** Hand wash the chug lid with warm, soapy water. Ensure all parts of the lid are thoroughly cleaned, especially around the spout and seal.
- **Sensor Puck:** The sensor puck is **not** dishwasher safe and should **not** be submerged in water. Wipe clean with a damp cloth. Ensure it is completely dry before reattaching to the bottle.

2. Battery Care

To prolong battery life, avoid extreme temperatures. Recharge the sensor puck when the app indicates low battery or when the LED glow reminders become dim or stop functioning.

3. Storage

When not in use for extended periods, ensure the bottle is clean and dry. Store the bottle and sensor puck separately in a cool, dry place.

TROUBLESHOOTING

Problem	Possible Cause / Solution
Bottle not tracking water intake.	• Ensure your phone's NFC is enabled and you are tapping the phone directly to the sensor puck. • Check if the sensor puck is securely attached and charged. • Verify Bluetooth connection between the bottle and the app. • Restart the Hidrate Spark app or your phone.
LED glow reminders not working.	• Check the battery level of the sensor puck in the app and recharge if necessary. • Ensure glow reminders are enabled in the Hidrate Spark app settings. • Verify the bottle is connected to the app via Bluetooth.
App not connecting to the bottle.	• Make sure Bluetooth is on and the bottle is within range. • Try unpairing and re-pairing the bottle in the app's settings. • Ensure the app is updated to the latest version.
Bottle leaking.	• Ensure the chug lid is screwed on tightly and the spout is firmly closed. • Check the silicone seals on the lid and sensor puck for proper placement and damage.

SPECIFICATIONS
