Using the Lift-Up Storage Feature

1. **Clear the Bed:** Remove any heavy items from the mattress surface.
2. **Lift the Mattress:** Grasp the hand strap located at the foot of the bed. With a firm and steady motion, lift the mattress upwards. The hydraulic mechanism will assist in lifting and holding the mattress in the open position.
3. **Access Storage:** Once the mattress is fully lifted, you can access the spacious storage area underneath.

4. **Close the Bed:** To close, gently pull the mattress downwards. The hydraulic mechanism will smoothly guide the mattress back into its closed position. Ensure no items are obstructing the closing mechanism.

MAINTENANCE

- **Cleaning Upholstery:** For general cleaning, gently vacuum the upholstered headboard and frame with a soft brush attachment. For spills, blot immediately with a clean, dry cloth. For stubborn stains, use a mild fabric cleaner following the product's instructions, testing on an inconspicuous area first.
- **Frame Inspection:** Periodically check all bolts and screws to ensure they remain tight. Retighten as necessary to maintain stability.
- **Hydraulic Mechanism:** The hydraulic mechanism is designed for long-term use and generally requires no special maintenance. Avoid applying excessive force when lifting or lowering the mattress.
- **Avoid Harsh Chemicals:** Do not use abrasive cleaners or harsh chemicals on any part of the bed frame, as this

may damage the finish or fabric.
