COMMON ISSUES AND SOLUTIONS

Problem	Solution
Drawers do not slide smoothly.	Check for obstructions in the drawer glides. Ensure the glides are properly aligned and securely fastened. A small amount of silicone lubricant can be applied to the glides if needed.
Cabinet doors are misaligned or do not close properly.	Adjust the hinges. Most furniture hinges allow for minor adjustments using a screwdriver to align the doors vertically, horizontally, or for depth. Refer to the assembly instructions for specific hinge adjustment details.
The cabinet feels unstable or wobbly.	Ensure the cabinet is placed on a level surface. Check all assembly screws and fasteners to confirm they are fully tightened. If an anti-tip kit was provided, ensure it is correctly installed and secured to a wall stud.
Surface scratches or minor damage.	For minor scratches, a wood repair marker or furniture polish matching the finish color may help conceal the damage. For deeper damage, professional repair may be required.
