

SUNPOW MD13-US

SUNPOW MD13 Metal Detector User Manual

Model: MD13-US

1. INTRODUCTION

Thank you for choosing the SUNPOW MD13 Metal Detector. This manual provides essential information for the proper setup, operation, and maintenance of your device. Please read it thoroughly before use to ensure optimal performance and longevity of your metal detector.

The SUNPOW MD13 is designed for both adults and kids, offering stable anti-interference capabilities, higher accuracy, and a large LCD display for clear information. Its IP68 waterproof search coil allows for versatile use in various environments.

2. SETUP AND ASSEMBLY

Follow these steps to assemble your SUNPOW MD13 Metal Detector:

- Unpack Components:** Carefully remove all components from the packaging. Ensure you have the main control unit, adjustable stem, search coil, armrest, headphones, foldable shovel, and two 9V batteries.
- Install Batteries:** Open the battery compartment on the main control unit and insert the two 9V batteries, ensuring correct polarity. Close the compartment securely.
- Attach Search Coil:** Connect the search coil to the lower stem using the provided bolt and washers. Ensure the washers are properly seated in the slots to prevent wobbling.
- Assemble Stem:** Connect the lower stem (with the search coil) to the middle stem, and then connect the middle stem to the upper stem. The stem is adjustable to suit different user heights.
- Mount Control Unit:** Slide the main control unit onto the top of the upper stem. Secure it in place.
- Connect Search Coil Cable:** Wrap the search coil cable neatly around the stem and plug the connector into the port on the main control unit. Ensure a snug fit.
- Attach Armrest:** Secure the armrest to the upper stem. Adjust its position for comfortable use.
- Connect Headphones:** Plug the headphones into the designated audio jack on the control unit.

3. OPERATING INSTRUCTIONS

The SUNPOW MD13 features a large LCD display and intuitive controls for easy operation.

3.1 Control Panel Overview

SIMPLE & INTUITIVE & CLEAR

Figure 3: The clear and intuitive LCD display shows target ID, depth, sensitivity, volume, and mode indicators. Buttons for Power On/Off, Pinpoint, Mode Select, and Sensitivity/Volume Adjust are clearly visible.

3.2 Detection Modes

The MD13 offers four distinct detection modes:

- **All Metal Mode:** Detects all types of metals. Ideal for general treasure hunting when you want to find everything.
- **Notch Mode:** Allows you to eliminate unwanted metals. You can selectively ignore certain metal types (e.g., iron, pull tabs) to focus on more valuable targets.
- **Pinpoint Mode (PP):** Used to precisely locate the target once a general area has been identified. This helps in minimizing digging and quickly retrieving the item.

- **Memory Mode:** Detects only the memorized metal type. This is useful for repeatedly searching for a specific type of target.

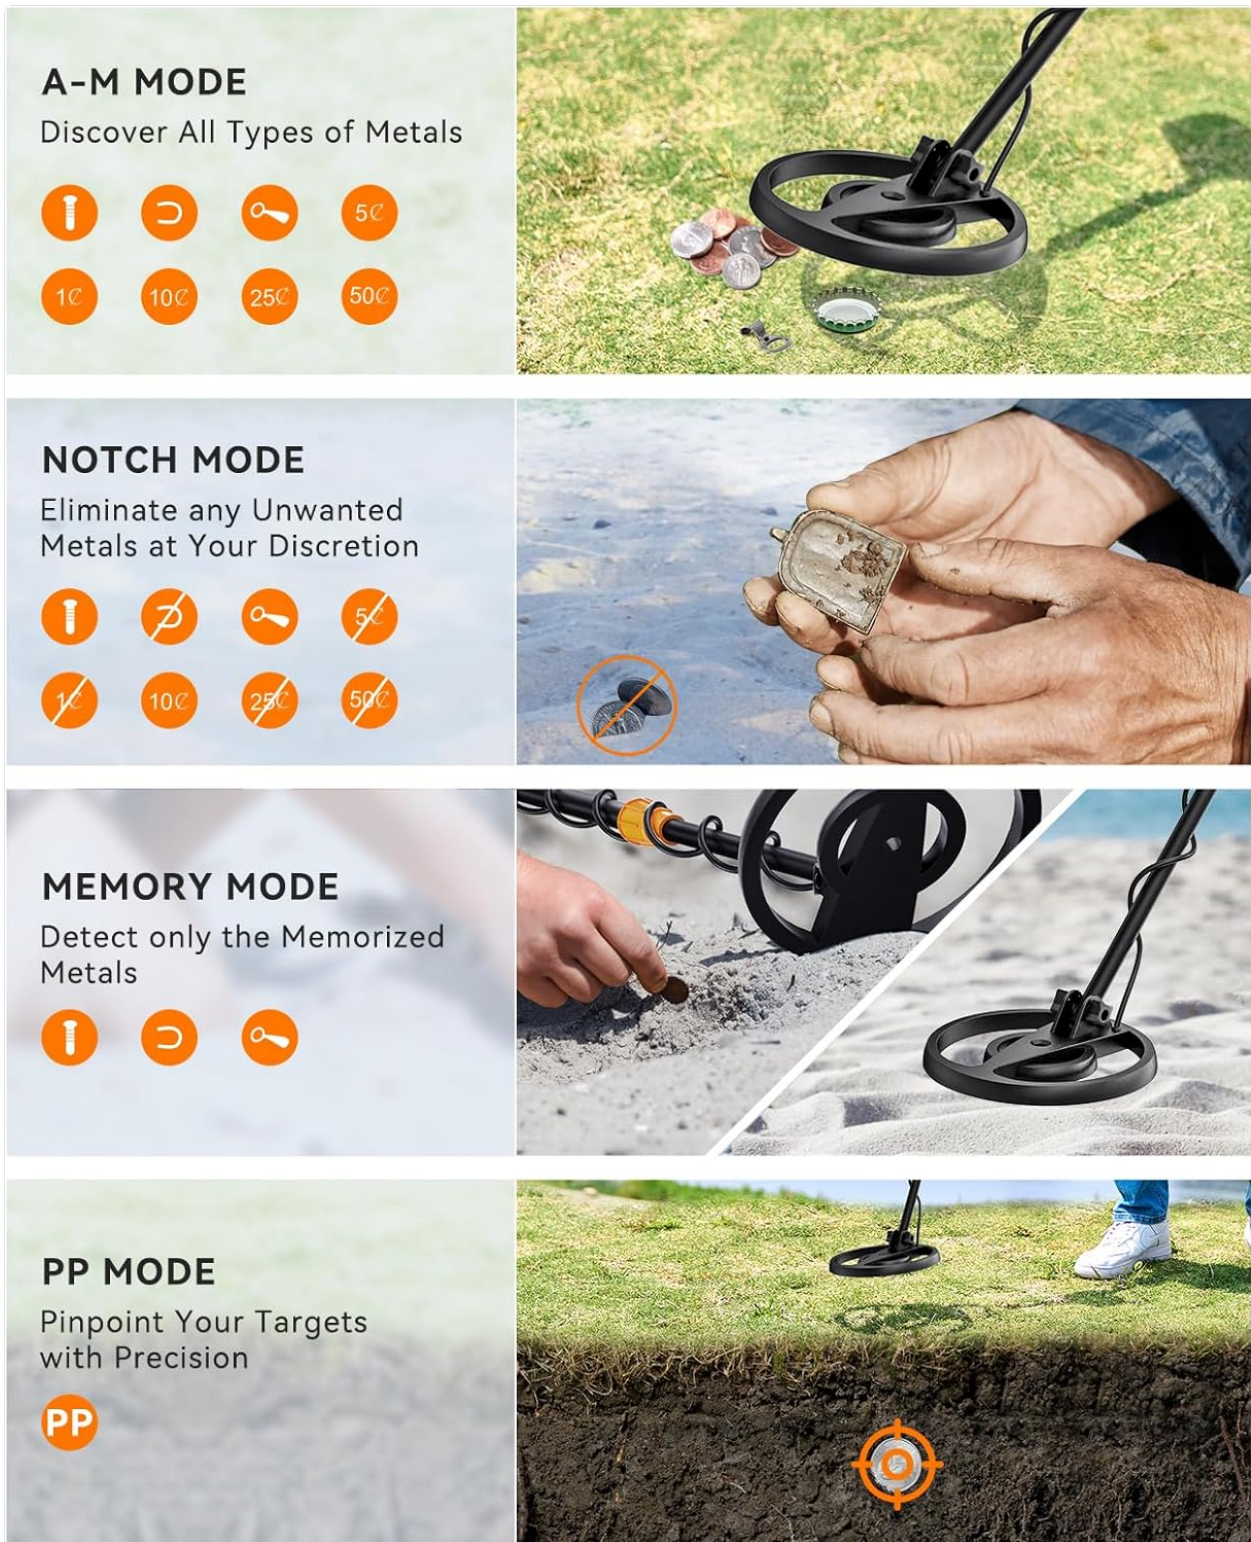

Figure 4: Visual representation of the four detection modes and their primary functions.

3.3 Target Identification and Depth

The large LCD screen provides clear information about detected targets:

- **Target ID:** A numerical value (0-99) indicates the probable type of metal. Different ranges correspond to different metals (e.g., iron, 5-cent coins, 1-cent coins, 10-cent coins, 25-cent coins, 50-cent coins).
- **Depth Indicator:** Shows the approximate depth of the detected object, helping you determine how deep to dig.

- **Audio Tones:** The detector emits distinct audio tones for different metal types, allowing for identification without constantly looking at the screen.

Figure 5: The LCD screen displaying target identification values and corresponding metal types.

3.4 Search Coil Usage

The 8-inch search coil is IP68 waterproof, allowing for detection in shallow water. **Note: The control box is not waterproof and should not be submerged.**

IP68 WATERPROOF SEARCH COIL

Finding Underwater Treasures

Note: The control box is not waterproof.

Figure 6: The IP68 waterproof search coil in use near water. Remember to keep the control box dry.

4. MAINTENANCE

Proper maintenance ensures the longevity and performance of your metal detector:

- **Cleaning:** After each use, especially in sandy or wet conditions, wipe down the search coil and stem with a damp cloth. Avoid using abrasive cleaners.
- **Battery Care:** Remove batteries if the detector will not be used for an extended period to prevent leakage and damage. Store batteries in a cool, dry place.
- **Storage:** Store the metal detector in a dry, cool environment, away from direct sunlight and extreme temperatures. The included carry bag is ideal for protection during storage and transport.

- **Cable Inspection:** Periodically check the search coil cable for any signs of wear or damage. Ensure connections are secure.

5. TROUBLESHOOTING

If you encounter issues with your metal detector, refer to the following common problems and solutions:

- **No Power:**
 - Check if batteries are correctly installed.
 - Ensure batteries have sufficient charge. Replace if necessary.
 - Verify all cable connections are secure.
- **False Signals/Erratic Behavior:**
 - Reduce sensitivity settings. High sensitivity can pick up more ground mineralization or electrical interference.
 - Move away from power lines, other electronic devices, or large metal structures.
 - Perform a ground balance if available (refer to specific instructions in the full user guide for advanced models, though MD13 is generally automatic).
- **No Detection:**
 - Increase sensitivity settings.
 - Ensure the search coil is properly connected.
 - Verify you are in the correct detection mode (e.g., All Metal mode for general searching).

For persistent issues not covered here, please contact customer support.

6. SPECIFICATIONS

Feature	Specification
Brand	SUNPOW
Model Number	MD13-US
Color	Black
Power Source	Battery Powered (2 x 9V batteries)
Material	Acrylonitrile Butadiene Styrene
Item Weight	1.4 Pounds
Product Dimensions	7"L x 4"W x 14"H
Adjustable Length	Yes
Display Type	LCD
Search Coil Size	8 Inches
Waterproof Rating	IP68 (Search Coil Only)

7. WARRANTY AND SUPPORT

Limited Warranty: SUNPOW products are backed by a limited warranty against defects in materials and workmanship. Please retain your proof of purchase for warranty claims. Specific warranty duration and terms may vary by region. Refer to the product packaging or the official SUNPOW website for detailed warranty information.

Customer Support: For technical assistance, troubleshooting, or warranty inquiries, please contact SUNPOW customer support through the following channels:

- **Online:** Visit the official SUNPOW Store on Amazon:[SUNPOW Store](#)
- **Email:** Refer to the contact information provided in your product packaging.

Please have your model number (MD13-US) and purchase date ready when contacting support.

	<p>SUNPOW OT-MD03 Metal Detector User Manual for Adults & Kids</p> <p>Comprehensive user manual for the SUNPOW OT-MD03 Metal Detector. Learn how to use this high-accuracy device, featuring an LCD display, pinpoint function, DISC mode, and a waterproof search coil, for metal detecting adventures.</p>
	

Owner's manual for the SUNPOW GC-1083 Metal Detector, covering features, assembly, battery installation, control box layout, LCD display, control buttons, testing, outdoor detecting, pinpointing, troubleshooting, and maintenance.

Page123456789101112131415161718192021222324252627282930313233343536373839404142434445464748495051525354555657585960616263646566676869707172737475767778798081828384858687888990919293949596979899100

2.SENS (Sensitivity) Adjust the sensitivity from 1 to 10. The higher the number, the more sensitive the detector. This sensitivity control does not affect Pinpoint sensitivity.

Note: If the detector beeps erratically or beeps when there are no metal objects being detected, reduce the sensitivity.

Note: Cut phone, and phone lines, etc., all induce interference signals and will cause the detector to beep when no metal is present and sometimes to beep erratically.

3.VOLUME Adjust the volume level from 0 to 10.

4.DISC Discrimination is an important feature of professional metal detectors. It allows user to reject unwanted and unwanted targets. The **DISC** control is Discrimination function of the detector. In its default setting, all metals are detected. Use the **DISC** function in order to eliminate unwanted types of metals from detection. You only need to eliminate the targets in order. Each time you press "V", button, it

-07-

target will disappear. The target disappears means that category is eliminated from detection. To pick up the eliminated target category, press "V" and categories will be accepted back in order.

Note: The two targets on the right cannot be eliminated. These two targets represent silver or other high value targets, which are generally desirable. So the detector does not allow them to be discriminated out.

5.NOTCH: It is similar to Discrimination (**DISC**). It allows you out of turn to accept or reject different types of metals. The **DISC** can only accept or reject metals in order.

The **NOTCH** Mode is only available in **FOL**, **Sc**, **ALLM**, and **1c** Press four categories.

6. ID is a new category. The target ID will flash for 3 seconds and then it will change to the opposite side. (In photo MENU) while the target ID is flashing then it will change to the opposite side. If the target has been eliminated previously and disappears now indicates that the target has been eliminated from detection. At same, the target disappeared before and illuminates now indicates that target is matched in or can be detected.

-08-

CONTROL BUTTONS

- **POWER:** Press the button to turn on the detector. Press it again to turn off the detector.
- **MENU:** Press MENU to make a active and select operation mode (NOTCH or DISC), all SENS or VOLUME.
- **INCREASE (+):** Increase the level of sensitivity or volume. (DISC Discrimination) or NOTCH.
- **DECREASE (-):** Decrease the level of sensitivity or volume and the range of DISC (discrimination) or NOTCH.
- **PINPOINT:** Press and hold for precision target pinpoint at any time.

TESTING THE DETECTOR

- 1. Supplies Needed:**
- A bottle cap (made of iron)
 - A quarter (25¢)
 - A nickel (5¢)
 - A Penny (1¢)
 - A Gold Ring
 - A dime (10¢)

-09-

- 2. Position the Detector:**
- 1) Place the detector on a table with the search coil hanging over the edge.
 - 2) Be sure that the search coil is far away from walls or metal objects. Keep the search coil away from any metal in the table.
 - 3) Turn off equipment that may interfere with electromagnetic radiation.
 - 4) Point the search coil back.
 - 5) Press POWER to turn on.

3. Using ALL METAL Feature

When all objects over the search coil and notice the different tones.

- 4. Using DISC (Discrimination) Feature:**
- 1) Press MENU until DISC is displayed on LCD.
 - 2) Press "V" once. The bottle cap/minor will disappear.
 - 3) Wave the bottle cap. It will not be detected because it has been "discriminated out".

- 5. Using NOTCH Feature:**
- 1) Press MENU until NOTCH is displayed on LCD.
 - 2) Press "V" twice. Sc will flash for 3 seconds and disappear that means Sc is "notch out" (eliminated). To eliminate 1c, press "V" until 1c flash and disappear.

-10-

- 3) Wave Sc or 1c over the search coil. Sc and 1c will not be detected because they have been "notched out" (eliminated). Notice, the target categories disappear on LCD can not be detected.

If you want to pick up the target type you eliminated before, press "V" or "-" to the target, and then wait for the target to flash for 3 seconds, or press MENU button when it is beeping.

- 6. Using PINPOINT Feature:**
- 1) Press and hold "PINPOINT" button, PP will appear on LCD display.
 - 2) Hold a coin motionless over the search coil.
 - 3) Sweeping coin over search coil.
 - 4) Notice that the sound changes as the coin moves closer or further.
 - 5) Notice that the depth indicator changes as the coin moves up and down.

- 7. Adjusting SENS (Sensitivity)**
- 1) Press MENU until SENS is displayed on LCD.
 - 2) Press "+" or "-" to set the SENS. Sensitivity level can be set from 1 to 10.

- 8. Adjusting VOLUME**
- 1) Press MENU until VOLUME is displayed on LCD.
 - 2) Press "+" or "-" to set Volume. Volume level can be set from 0 to 10.

OVERLOAD WARNING

If a metal object or highly magnetic coil are too close to the

-11-

search coil, the detector will overload and "OL" will appear on LCD display. The detector will make a rapid, repeating, high-pitched warning sound. Continued use will drain the battery, but the detector will not function in these conditions. If overload occurs, keep the search coil away from the target.

Note: There is a wide variety of metals and no target can be identified for certain until unearthed. This table is for general reference only.

OUTDOOR DETECTING

- 1 Find a place outside where there is no metal.
- 2 Place a sample you want to find on the ground.
- 3 Press POWER to turn on the detector.
- 4 During the search coil gently from side to side, slightly overlapping each sweep as you move forward. Keep your search coil approximately 1-2 inches above the ground as you search.

- Notes:**
- Flailing during the sweep, or at the ends of your sweep, can cause false readings.
 - Move slowly, hurrying will cause you to miss targets.

-12-

- Most desirable objects will respond with a repeatable tone. When discriminating, iron and hot objects generally do not respond.
- False signals can be caused by trashy ground, electrical interference, or by large irregular trash objects. These signals are easily recognized by their either broken or non-repeatable nature.

DETECTING WITH PINPOINT

After you find a target, you can use PP (Pinpoint) to find the exact location of the target as follows:

- 1 Press and hold PP to activate the Pinpoint feature.
- 2 Move the search coil slowly across the target, and you can locate it by the sound.

Narrow the Detection Range

- 1 To narrow the response further, position the search coil near the target.
- 2 Press PP button and hold, move the search coil slowly.
- 3 When you hear the sound, you can release the PP.
- 4 And then press PP to continue the detection. In this way you can narrow the range of the target.
- 5 Repeat the above steps.

When the coil moves to the center of the target, the signal from the detector is the strongest.

-13-

Troubleshooting Guide

Problem	Reason	Suggestion
The detector displays "OL" (Overload) and does not respond.	1 The detector may receive close to metal and does not respond. 2 The detector may be too close to a large metal object.	1 Change searching distance to avoid some time to track. 2 Turn the detector off and wait for the battery to recharge.
The detector sounds erratically or does not respond.	1 Sensitivity set too high (discrimination). 2 Searching the detector is too close to the target. 3 Wrong angle. 4 Large metal objects are close to the detector (discrimination).	1 Reduce sensitivity. 2 Increase the distance to the target. 3 Adjust the angle. 4 Keep away from large metal objects.
The detector does not detect anything.	1 Sensitivity set too low. 2 Target object is not in the search area. 3 The ground is too dry or too wet.	1 Increase sensitivity. 2 Move the target object into the search area. 3 Wait for the ground to dry or wet.
LCD display nothing or some characters are not displayed.	1 The battery is not fully charged. 2 The battery is not inserted correctly. 3 The battery is not connected to the detector.	1 Charge the battery. 2 Insert the battery correctly. 3 Connect the battery to the detector.
No sound, no beep.	1 The coin cell is not connected. 2 Dead battery.	1 Check the coin cell connection. 2 Replace the battery.

Care and Maintenance

Our metal detector is an example of superior design and craftsmanship. The following suggestions will help you care for your metal detector so you can enjoy it for years.

- 1) Handle the detector gently and carefully. Dropping it can damage internal parts, and it can cause the detector to work improperly.
- 2) Use the detector only in normal temperature environments. Temperature extremes can interfere with the detector's design, damage the coils of the detector.
- 3) Keep the detector away from dust and dirt, which can cause premature wear of parts.
- 4) After the detector with a sharp stain occasionally to keep it looking new. Do not use harsh chemicals, cleaning solvents, or strong detergents to clean the detector.

Thank you for choosing **SUNPOW** metal detector. Please read the user's manual carefully before operating the metal detector. For the latest and most complete information, please refer to the user's manual. You can find the user's manual on the website: www.sunpow.com. Email: sunpow@sunpow.com. Email: sunpow@sunpow.com.

TABLE OF CONTENTS

FEATURES

With your MD-603 metal detector, you can hunt for coins, jewelry, gold, and silver anywhere. The detector comes with high sensitivity and strong ability of discrimination. It's sensitive and easy to use.

•LCD Display Shows the possible type of metal, the signal strength, the range of DISC & NOTCH, the level of SENS and VOLUME, and battery condition. It also shows current display for target.

•Three Tone Audio Discrimination Sounds three distinctive tones: high, medium and low for different types of metal.

•Notches Proves junk metal and finds valuable items by setting the notch range.

•DISC Discriminates the unwanted targets by setting the DISC numeric range. The detector will not detect the target when the numeric setting.

•Rangeable Proports the location of the target accurately.

•Super Fine Range Identification With a very fine sweep of the search coil to discriminate different types of metal.

•Headphones Jack Connect headphones of 3.5mm and operate without trouble.

•Retractable Search Reduces the detector even if you must put it under shadow water.

•Adjustable Shaft Adjust the length of shaft for comfortable use.

•Power Your metal detector requires two 9-volt alkaline batteries.

PREPARATION

STEP 1: Your MD-603 detector requires no assembly or tools. Simply remove the detector from the box.

STEP 2: Turn the detector 180 degrees as shown in the figure.

STEP 3: Press down the LRL/CLK button to release the handle.

STEP 4: Slide out the antenna to the desired length. (Typically just under your elbow). And fully extend the lower shaft to the desired length for your height.

BATTERIES

•Please use two 9V alkaline batteries.

•Open the battery cover and insert the battery according to the polarity sign in the battery box.

•Warning: Dispose of old batteries properly and properly. Please buy or turn them.

•Caution:

- Do not mix the old and new batteries or different types of batteries.
- Use only fresh alkaline batteries of required size.
- If you don't plan to use the unit for a week or more time, remove the batteries. Batteries can leak chemicals that can damage electronic parts.
- If the battery indicator on the LCD lights up, replace the battery.

USING HEADPHONES

It is recommended to choose the headphones with volume control. Insert the headphones 3.5mm plug into the PHONES jack. At this time the internal speaker disconnects.

Listening Safety

•To prevent your hearing, set the volume to the lowest setting.

•If you're not happy listening, adjust the volume to a comfortable level.

•Do not use headphones for extended periods of time. Extended high volume listening can lead to permanent hearing loss.

•Do not wear headphones while operating your detector in high traffic areas. Pay attention to traffic safety.

INSTRUCTIONS FOR CONTROL PANEL

1. POWER SWITCH
Press the power switch to turn on/off the detector.

2. LCD DISPLAY

The LCD display shows the following information:

- DISC/NOTCH:** Shows the DISC/NOTCH range.
- SENS:** Shows the SENS level.
- VOLUME:** Shows the VOLUME level.
- BATTERY:** Shows the battery condition.
- DISC/NOTCH:** Shows the DISC/NOTCH range.
- SENS:** Shows the SENS level.
- VOLUME:** Shows the VOLUME level.
- BATTERY:** Shows the battery condition.

3. CONTROL BUTTONS

•MENU: Press MENU/LCD to select VOLUME, DISC, NOTCH, SENS, and BATTERY.

•VOLUME: Press MENU/LCD to select VOLUME. Then press ←/→ to adjust the volume.

•DISC: Press MENU/LCD to select DISC. Then press ←/→ to adjust the DISC range.

•SENS: Press MENU/LCD to select SENS. Then press ←/→ to adjust the SENS level.

•BATTERY: Press MENU/LCD to select BATTERY. Then press ←/→ to adjust the BATTERY level.

•NOTCH: Press MENU/LCD to select NOTCH. Then press ←/→ to adjust the NOTCH range.

•Rangeable: Press RANGE/CLK to adjust the rangeable.

•Retractable: Press RETRACT to retract the antenna.

•Adjustable: Press ADJUST to adjust the shaft length.

4. BACKLIGHT SWITCH

Press the backlight switch to turn on/off the backlight of the detector.

5. MEMORY

The detector will memorize all the settings before power is off.

TARGET INDICATIONS

1. Numeric ranges of target:

00-10	IRON
10-20	STEEL
20-30	ALUMINUM
30-40	COPPER
40-50	SILVER
50-60	GOLD
60-70	PLATINUM
70-80	DIAMOND
80-90	EMERALD
90-100	RUBY

Notes: There are a wide variety of metals and no target can be specified for certain with accuracy. This table is a general reference only.
