While AQQA filter cartridges are designed for reliable performance, here are some common issues and their potential solutions:

- **Issue: Unpleasant Odor or Turbid Water:**
  Solution: This often indicates that the filter cartridge is saturated with debris and activated carbon has lost its effectiveness. Replace the filter cartridge immediately. Ensure regular replacement every 2-4 weeks to prevent this.
- **Issue: Reduced Water Flow from Filter:**
  Solution: The cartridge may be clogged with particulate matter. Remove the cartridge and inspect it. If heavily soiled, replace it. Also, check the filter pump and intake for any blockages.
- **Issue: Harmful Bacteria Growth (implied by product benefits):**

Solution: While the filter helps, maintaining proper tank hygiene, avoiding overfeeding, and ensuring regular water changes are also crucial. If issues persist, check water parameters and consider additional biological filtration.
