7. TROUBLESHOOTING

Problem	Possible Cause	Solution
---------	----------------	----------

Problem	Possible Cause	Solution
Bed frame is wobbly or unstable.	Loose connections; uneven floor.	Ensure all mortise and tenon joints are fully engaged. Check and tighten any bolted connections. Move the bed to a level surface or use shims if necessary.
Squeaking noises.	Loose connections; friction between parts; mattress movement.	Tighten all connections. Ensure slats are properly seated and the Velcro is holding them. The bed frame includes noise-reduction padding, but ensure it is correctly positioned.
Slats are shifting.	Velcro not engaged; improper placement.	Ensure the Velcro on the slats is properly aligned and pressed onto the corresponding strips on the side rails. Re-position slats evenly.
